| 4 | Link to WP Plant Lead Sheet |
| 5 | |
| 6 | **Note 1**: This adjustment reflects the imprudence impairment consistent with the final order in NMPRC Case No. 22-00270-UT. For GAAP accounting purposes, this impairment was recorded to FERC Account 116 "Other Electric Plant Adjustments"; however for regulatory purposes, this adjustment is reclassified into FERC Account 101, to properly remove the amounts from rate base. |
| 7 | **Note 2:** The Palo Verde Asset Retirement Costs, recorded in plant in service, are not included in rate base, as final decommissioning of PV are ultimately funded to an external trust, and recovery of decommissioning expense from PNM Retail customers are based on those funding amounts. This treatment is consistent with prior rate cases. |
| 8 | **Note 3**: Adjustment reflects reclassification of capital assets at the end of the Base Period associated with Palo Verde Leased Capacity. Leased Capacity assets approved to be recovered as through regulatory assets have been reclassified to the Regulatory Asset Workpapers. Assets associated with the sale of certain assets to SRP are removed to account for this sale transactions. This adjustment is consistent with the treatment in the Final Order of NMPRC Case No. 22-00270-UT. |
| 9 | **Note 4:** PNM Annualized base period depreciation expense by multiplying the June 2026 gross plant balance by the applicable annual depreciation rate that was approved in Case No. 22-00270-UT. The calculation takes base period ending balance and allocates Depreciation rate to determine the total of annualized depreciation. The total will then subtract the expense amount, and will calculate an adjustment (if necessary). |
| 10 | **Note 5**: Reflects capital investment on Shared Services that are allocated to subsidiaries other than PNM. See WP Plant - 8, columns T, U and V for Base Period allocation to PNM. The allocation of Shared Services is based on the 13-month average at the end of the Test Period. For the Test Period, the 13-month average was calculated on a total company basis prior to the allocation of assets to PNM. Please refer to WP Plant - 8, columns BD, BE and BF for Test Period allocation to PNM. |
| 11 | **Note 6**: FERC accounts 365 (Overhead Conductors and Devices), 366 (Underground Conduit) and 367 (Underground Conductors and Devices) are allocated between Primary and Secondary System Distribution based on conductor footage study. See WP Plant -1 for allocation percentages. Also see the Direct Testimony of PNM witness Gray for further discussion on the conductor footage study. This note relates to information grouped within the outline function and is not visible on the printed schedule. |
| 12 | **Note 7**: Information in Column B "Location Number" is utilized to identify the applicable depreciation rates. |
| 13 | **General Notes**: |
| 14 | Please see WP Plant - 1b for variance between Adjusted Base Period and Test Period and the depreciation change attributable to the change in depreciation rates. |
| 15 | The electronic version of this worksheet uses the Microsoft excel outline function. This function groups the elements of cost, and or columns for print formatting purposes. |

| 8 | Note 1: Reflects removal of balances not requested in rate base in this retail rate case filing |
| 9 | Note 2: Please refer to PNM Exhibit RNG-3 for adjustments to the Base Period and support for the Test Period. Please |
| 10 | refer to PNM Exhibit RNG-4 for supporting work papers and information on linkage data. |
| 11 | Note 3: Pursuant to GAAP PNM recognized the impairment of the assets PNM is not receiving recovery of related to |
| 12 | Four Corners Power Plant, pursuant to the final order in NMPRC Case No. 22-00270-UT. |
| 13 | Note 4: Linkage and Test Period are shown in the net amount based on how information is reported in the Cost of |
| 14 | Service. |
| 15 | Debt and equity are adjusted to balance the Asset and Liabilities and Stockholder's Equity sections of Schedule I-1. The |
| 16 | adjustment based on the capital structure weighting provided in Schedule G-1 |
| 17 | PNM does not forecast non-cost of service items for the linkage and test period in this schedule. PNM has reflected |
| 18 | amounts included in the test period cost of service. |
| 19 | Column B data is from the Base Period historical information from the Company's Book Balance Amounts |

| 7 | |
| 8 | Please refer to the Rule 530 I-1 and Rule 530 I-2 schedule, and PNM Exhibits RNG-3 and RNG-4 for supporting information. |
| 9 | The statement of cash flows reflects the cost of service for PNM in the test period, which assumes a full year of |
| 10 | revenues as reflected in the cost of service study in the test period. This results in an additional amount of dividend |
| 11 | to PNM Resources in the test period. |
| 12 | PNM does not forecast non-cost of service items for the linkage and test period in this schedule as shown in |
| 13 | Column F, line 63. |
| 14 | PNM has reflected amounts included in the test period cost of service in the above schedule. |
| 15 | Column B data is from the Base Period historical information from the Company's Book Balance Amounts |

# PNM Schedule M-3

Comparison of rates for service under the present and proposed schedules

**Public Service Company of New Mexico**
**M-3 Demand and Energy Loss Factors: Base and Test Period**
Base Period Ending June 30, 2026
Test Period Ending September 30, 2028

**Base Period 2025 -2026 Loss Factors[1]**

| Line No. | Energy Loss Rates by Voltage Level (Rates are Additive[2]) | Generation to Meter | Meter to Generation | Applicable Rate Classes |
|---|---|---|---|---|
| 1 | Transmission | 2.705% | 2.780% | All rate classes |
| 2 | Subtransmission (46/69 kV) | 0.328% | 0.329% | All rate classes except 15B, 33B, and 36B |
| 3 | Substation | 0.567% | 0.570% | All rate classes except 5B, 15B, 33B, and 36B |
| 4 | Primary Distribution | 1.564% | 1.589% | All rate classes except 5B, 15B, 30B, 33B, 35B, and 36B |
| 5 | Secondary Distribution | 2.192% | 2.241% | All rate classes except 4B, 5B, 11B, 15B, 33B, 35B, and 36B |

| Line No. | Demand Loss Rates by Voltage Level (Rates are Additive) | Generation to Meter | Meter to Generation | Applicable Rate Classes |
|---|---|---|---|---|
| 6 | Network | 0.00% | 0.00% | N/A |
| 7 | Transmission | 2.70% | 2.78% | All rate classes |
| 8 | Subtransmission | 0.33% | 0.33% | All rate classes except 15B, 33B, and 36B |
| 9 | Substation | 0.62% | 0.62% | All rate classes except 5B, 15B, 33B, and 36B |
| 10 | Primary Distribution | 3.78% | 3.93% | All rate classes except 5B, 15B, 30B, 33B, 35B, and 36B |
| 11 | Secondary Distribution | 2.72% | 2.80% | All rate classes except 4B, 5B, 11B, 15B, 33B, 35B, and 36B |

**Test Period Losses[2]**

| Line No. | Energy Loss Rates by Voltage Level (Rates are Additive[2]) | Generation to Meter | Meter to Generation | Applicable Rate Classes |
|---|---|---|---|---|
| 1 | Transmission | 2.70% | 2.78% | All rate classes |
| 2 | Subtransmission (46/69 kV) | 0.33% | 0.33% | All rate classes except 15B, 33B, and 36B |
| 3 | Substation | 0.57% | 0.57% | All rate classes except 5B, 15B, 33B, and 36B |
| 4 | Primary Distribution | 1.56% | 1.59% | All rate classes except 5B, 15B, 30B, 33B, 35B, and 36B |
| 5 | Secondary Distribution | 2.19% | 2.24% | All rate classes except 4B, 5B, 11B, 15B, 33B, 35B, and 36B |

| Line No. | Demand Loss Rates by Voltage Level (Rates are Additive*) | Generation to Meter | Meter to Generation | Applicable Rate Classes |
|---|---|---|---|---|
| 6 | Network | 0.00% | 0.00% | N/A |
| 7 | Transmission | 2.70% | 2.78% | All rate classes |
| 8 | Subtransmission | 0.33% | 0.33% | All rate classes except 15B, 33B, and 36B |
| 9 | Substation | 0.62% | 0.62% | All rate classes except 5B, 15B, 33B, and 36B |
| 10 | Primary Distribution | 3.78% | 3.93% | All rate classes except 5B, 15B, 30B, 33B, 35B, and 36B |
| 11 | Secondary Distribution | 2.72% | 2.80% | All rate classes except 4B, 5B, 11B, 15B, 33B, 35B, and 36B |

Notes:

1. Base period and Test period loss rates are the same.
2. Rates are additive means that rates compound.

For example, going from Secondary Meter to Generation, loss rates (LR) are combined multiplicatively as:

Loss Rate Combined = (1+LR Secondary) * (1+LR Primary) * (1+LR Substation) * (1+LR Subtrans) * (1+LR Trans) - 1.0

The combined result is larger that the arithmetic sum of the stepwise loss rates because of compounding.

# PNM Schedule O-4

Explanation of proposed changes to existing rate schedules

**28th Revised 1A – Residential Service**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. The changes relating to a new low-income rate option are explained in the Direct Testimony of PNM witnesses Aguirre and Babej. Proposed changes also include the elimination of the participation cap for the Whole House Electric Vehicle Rate, and the requirement to take service under this rate option for customers who received a rebate towards the purchase of an EV charger, as explained in the Direct Testimony of PNM Witness Aguirre. The remaining language revisions are intended solely to make the tariff clearer and more concise.

**26th Revised 1B – Residential Service**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. The changes to the tariff incorporating time-of-day rates are explained in the Direct Testimony of PNM witnesses Aguirre and Menhorn. All other language revisions are intended to make the tariff clearer and more concise.

**27th Revised 2A – Small Power Service**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. All other language revisions are intended to make the tariff clearer and more concise.

**27th Revised 2B – Small Power Service Time-of-Use Rate**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. The changes to the tariff incorporating time-of-day rates are explained in the Direct Testimony of PNM witness Menhorn. All other language revisions are intended to make the tariff clearer and more concise.

**26th Revised 3B – General Power Service Time-of-Use Rate**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. The changes to the tariff incorporating time-of-day rates are explained in the Direct Testimony of PNM witness Menhorn. All other language revisions are intended to make the tariff clearer and more concise.

**9th Revised 3C – General Power Service (Low Load Factor) Time-of-Use Rate**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. The changes to the tariff incorporating time-of-day rates are explained in the Direct Testimony of PNM witness Menhorn. All other language revisions are intended to make the tariff clearer and more concise.

**5th Revised 3D – Municipalities and Counties General Power Service Time-of-Use Rate**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. The changes to the tariff incorporating time-of-day rates are explained in the Direct Testimony of PNM witness Menhorn. All other language revisions are intended to make the tariff clearer and more concise.

**5th Revised 3E – Municipalities and Counties General Power Service (Low Load Factor) Time-of-Use Rate**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. The changes to the tariff incorporating time-of-day rates are explained in the Direct Testimony of PNM witness Menhorn. All other language revisions are intended to make the tariff clearer and more concise.

**5th Revised 3F – Non-residential Charging Station - Pilot**

The only changes made to this tariff are to the rates, which are reflected in the Advice Notice filed with this application.

**25th Revised 4B – Large Power Service Time-of-Use Rate**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. The changes to the tariff incorporating time-of-day rates are explained in the Direct Testimony of PNM witness Menhorn. Revisions to the tariff also include the addition of a new Transmission Service Level rate and establishing a cap of 30MW under the applicability section as explained in the Direct Testimony of PNM Witness Aguirre. All other language revisions are intended to make the tariff clearer and more concise.

**27th Revised 5B – Large Service for Customers ≥ 8,000 kW at 115kV, 69kV, or 34.5kV**

PNM is proposing to eliminate this tariff.

**20th Revised 6 – Private Area Lighting Service**

The only changes made to this tariff are to the rates, which are reflected in the Advice Notice filed with this application.

**25th Revised 10A – Irrigation Service**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. All other language revisions are intended to make the tariff clearer and more concise.

**25th Revised 10B – Irrigation Service Time-of-Use Rate**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. The changes to the tariff incorporating time-of-day rates are explained in the Direct Testimony of PNM witness Menhorn. All other language revisions are intended to make the tariff clearer and more concise.

**24th Revised 11B – Water and Sewage Pumping Time-of-Use Rate**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. The changes to the tariff incorporating time-of-day rates are explained in the Direct Testimony of PNM witness Menhorn. All other language revisions are intended to make the tariff clearer and more concise.

**15th Revised 15B – Large Service for Public Universities ≥ 8,000 kW with Customer-Owned Generation Facilities Served at 115kV**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. The changes to the tariff incorporating time-of-day rates are explained in the Direct Testimony of PNM witness Menhorn. All other language revisions are intended to make the tariff clearer and more concise.

**21st Revised 20 – Integrated System Streetlighting and Floodlighting Service New Installations**

The only changes made to this tariff are to the rates, which are reflected in the Advice Notice filed with this application.

**5th Revised 30B – Large Service for Manufacturing ≥ 30,000 kW at Distribution Voltage**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. All other language revisions are intended to make the tariff clearer and more concise.

**8th Revised 33B – Large Service for Station Power (Time-of-Use)**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. The changes to the tariff incorporating time-of-day rates are explained in the Direct Testimony of PNM witness Menhorn. All other language revisions are intended to make the tariff clearer and more concise.

**6th Revised 35B – Large Power Service ≥ 3,000 kW**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. The changes to the tariff incorporating time-of-day rates are explained in the Direct Testimony of PNM witness Menhorn. All other language revisions are intended to make the tariff clearer and more concise.

**8th Revised 36B – Large Power Service ≥ 3,000 kW**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application. Some minor language revisions were made for clarification purposes.

**12th Revised Rider 23 – Fuel and Purchased Power Cost Adjustment Clause ("FPPCAC")**

Changes to this tariff include a change in the applicability provisions to remove Rate 5B and add Rates 37B and 38B as proposed in this case, as well as adjustments to the loss factor as explained in the Direct Testimony of PNM Witness Hayat. All other language revisions are intended to make the tariff clearer and more concise.

**3rd Revised Rider 45 – Economic Development Rider ("EDR") Applicable to Rate Nos. 4B, 30B and 35B**

Changes to this tariff include a change in the applicability provisions to remove Rate 5B and add Rate 38B. All other language revisions are intended to make the tariff clearer and more concise.

**2nd Revised Rider 49 – Production Cost Allocation Rider**

Changes to this tariff in the definitions section are explained in the Direct Testimony of PNM witness Aguirre. All other language revisions are intended to make the tariff clearer and more concise.

**4th Revised Rider 56 – Community Solar Rider**

Changes to this tariff, including rates, are reflected in the Advice Notice filed with this application.

**1st Revised Rider 60 Grid Modernization Rider,**

Changes include revisions to include the proposed new Rate No. 37B and Rate No. 38B and to update the projected rates effective with the base rates proposed in this case.

The difference between generation and transmission equals transmission losses; the difference between transmission and subtransmission equals subtransmission losses; and the difference between subtransmission and distribution equals distribution losses and unaccounted for energy (UFE). Losses are computed using Demand loss factors.

**Public Service Company of New Mexico**

**P-1 Total System and Retail Peak Demand Information at Generation and Distribution (Meter)**

Test Period Ending September 30, 2028

The difference between between Non-Coincident demand at generation MW and distribution MW represents losses and unaccounted for energy (UFE)

Losses are computed using Energy loss factors.

# PNM Schedule P-6

Weather data

**Public Service Company of New Mexico**
**Schedule P-6**
**Weather Data**
**Base Period Ending 6/30/2026**
**Test Period Ending 9/30/2028**
**This schedule is sponsored by PNM Witness Hayat**

Base Period Weather:

Historical, actual hourly weather data representative of the calendar month is used for the Base Period weather through June 2026.

Historical Weather Data

Historical hourly weather data were acquired from AccuWeather, a major vendor for high quality weather data. Actual hourly drybulb temperature data are used to calculate daily average temperatures, daily heating degrees (HD) and daily cooling degrees (CD) for each of four weather stations. The daily values are then combined across stations using weights that represent the fraction of PNM energy associated with each station. One set of weights is computed for winter months and these weights are applied to HD values. One set of weights is computed for summer months, and these weights are applied to CD values. A final set of weights are computed for all months, and these weights are applied to average temperature and global horizontal irradiation values. The weights are shown below.

| Station | HD | CD | Overall |
|---|---|---|---|
| KABQ (Albuquerque) | 77.7% | 80.3% | 79.1% |
| KALM (Alamogordo) | 4.3% | 4.7% | 4.4% |
| KDMN (Deming) | 4.1% | 4.2% | 4.1% |
| KSAF (Santa Fe) | 13.9% | 10.9% | 12.3% |

The data shown on tab P6-2 are for calendar month HDD (sum of the daily HD values), calendar month CDD (sum of the daily CD values), and calendar month averge drybulb temperature. Historical data are shown for July 2016 through June of 2026. Values beyond June of 2026 are normal calendar month values computed from the 10-year average between 2015 and 2024.

Base Period Weather and Weather Adjustments:

Historical, actual hourly weather are shown for calendar months on tab P6-2 and for billing months on tab P6-3. The billing month data are used to estimate customer use models and to develop predicted values for customer sales. Normal values for the billing month are used to develop predicted values for customer sales with normal weather. The difference between the two predicted values is the monthly weather adjustment for billed sales.

Weather Used for Forecasting, Including the Test Period:

Normal values for daily HD and CD and for monthly HDD and CDD are computed from the 10 years of historical data starting in January 2015 and ending in December 2024. Daily normal values are computed using the "average by date" method. For example, for each weather variable, the historical data provides 10 values for January 1st, and these 10 values are averaged. The 10 values for January 2 are averaged. And this continues through to the 10 values for December 31st. These values provide a relatively smooth pattern from winter to summer and back to winter as the year proceeds.

The daily normal CD and HD values are added up for the calendar month and the resulting CDD and HDD sums are shown for the test period on tab P6-2. The daily normal CD and HD values are also summed across the days in each billing cycle and these sums are averaged across cycles. The resulting CDD and HDD sums for the billing months in the test period are shown on tab P6-3.

| 51 | Weather Used for Monthly Class Use Models: |
| 52 | For monthly use models, monthly HDD and CDD values for each billing month are combined across the temperature |
| 53 | base values using different weights for each weather sensitive class. The weights are calculated from regression |
| 54 | models using daily energy data from load research samples. These data clearly identify where warm and cold |
| 55 | weather start to matter for each class and the relative power of low, medium and high-powered degrees for each |
| 56 | class. The estimated weights are shown below. For example, for the residential class, warm weather starts to |
| 57 | matter at 60 degrees. The first five degrees (60 to 65) are low-power degrees with a weight of .188. Degrees from |
| 58 | 65 to 70 are medium-power degrees with a weight of .474. Finally degrees above 70 are high-powered degrees with |
| 59 | a weight of 1.00. The weather variables constructed with these weights are best described as multi-part |
| 60 | degree-day splines. Use of this type of variable is the simplest way to accurately represent the nonlinear |
| 61 | relationship between class sales and temperature for each of the customer classes. |
