DIRECT TESTIMONY OF
REINA N. GUTIERREZ
NMPRC DOCKET NO. 26-0000XXX

I. INTRODUCTION AND PURPOSE

Q. Please state your name, position, and business address.

A. My name is Reina N. Gutierrez. I am the Senior Manager, Cost of Service for PNMR Services Company ("Shared Services"). Shared Services provides corporate services through shared services agreements to its parent company, TXNM Energy, Inc. ("TXNM"), and all of TXNM's subsidiaries, including Public Service Company of New Mexico ("PNM" or "Company"). My business address is 414 Silver SW, Albuquerque, NM 87102. A description of my position and background is included in PNM Exhibit RNG-1. The exhibit also includes a list of cases in which I have provided testimony at the New Mexico Public Regulation Commission ("Commission" or "NMPRC"). I am filing testimony on behalf of PNM.

Q. What is the purpose of your direct testimony in this case?

A. The purpose of my testimony is to:

1) Present and support the reasonableness of the Base Period, Adjusted Base Period, and Test Period cost of service[1] studies, as well as certain related schedules required to be filed pursuant to 17.9.530 NMAC ("Rule 530") as supplemented by 17.1.3 NMAC, the Future Test Year Rule ("FTY Rule");

[1] Throughout my testimony, the terms "cost of service" and "revenue requirements" are used interchangeably. The terms "Base Period," "Adjusted Base Period," and "Test Period" are defined below.

2) Describe and provide support for the adjustments that were made to the Base Period to develop an Adjusted Base Period, including allocations to PNM's various jurisdictions;

3) Explain the methodology used to develop the Test Period cost of service and provide the adjustments made in the linkage data to develop the Test Period;

4) Present and support the capital budgeting process as it relates to capital projects, including system calculations, adjustments and capital loads that are necessary to complete the capital budget;

5) Describe and explain the fully functional cost of service model;

6) Describe how PNM has included its grid modernization ("Grid Mod") revenue requirement in base rates as determined in the final order in Case No. 22-00058-UT;

7) Describe the proposal of the reclassification of Extended Day-Ahead Market ("EDAM") related revenues through PNM's Rider No. 23 – Fuel and Purchased Power Cost Adjustment Clause ("FPPCAC");

8) Describe Senate Bill 170 capital and load that is included in the Test Period; and

9) Request Commission approvals relating to the establishment and recovery of specific regulatory assets and liabilities.

Q. Please summarize the results of PNM's retail Test Period revenue requirement study.

A. The total Test Period retail revenue requirement is approximately $1.36 billion, based on a Test Period rate base of approximately $4.2 billion; a capital structure comprising 47.81% long-term debt, 0.19% preferred stock, and 52.00% common equity; and reflecting a return on equity ("ROE") of 9.90% and a cost of debt of 4.97%. The total Test Period revenue requirement consists of a non-fuel revenue requirement of approximately $1.23 billion and a fuel revenue requirement of $134.1 million. Included in the non-fuel revenue requirement is $56.0 million of costs collected in the Grid Mod Rider being rolled into base rates. PNM is requesting a non-fuel base rate revenue increase to cover a deficiency in Test Period non-fuel revenue of approximately $286.3 million. Additionally, PNM is seeking to pass revenues achieved through the transition into the EDAM of $25.6 million back to customers through the FPPCAC. See PNM Table RNG-1 below for a summary of the proposed revenue requirements and a comparison to revenues at existing rates.

PNM Table RNG-1
Summary Comparison of Revenue Requirement

Line No.	Description	PNM Base Rate
1	Non-Fuel Revenue	$ 942,109,637
2	Fuel Revenue	246,607,131
3	**Total Revenues at existing rates**	$ 1,188,716,768
4		
5		
6	**Revenue Requirement Requested**	
7	Non-Fuel Revenue Requirement	$ 1,228,438,144
8	Fuel Revenue Requirement	134,138,322
9	**Total Test Period Revenues per Revenue Requirement**	$ 1,362,576,466
10		
11	**Deficiency**	
12	Non-Fuel Deficiency - As Requested	$ 286,328,507
13	Fuel Deficiency Offset	(112,468,809)
14	**Total Net Deficiency**	**$ 173,859,698**

Note: Please refer to the testimony of PNM Witness Menhorn for total revenues at existing rates.

Q. Are you sponsoring any Rule 530 Schedules?

A. Yes. I am sponsoring the following Rule 530 Schedules: A-1, A-3 through A-5, B-1 through B-7, C-1, C-3, D-1, D-2, E-1 through E-4, F-1, H-1 through H-8, H-14 through H-16, I-1 through I-3, J-1, J-2, K-1, K-5, P-2 through P-4, P-7, P-11, P-12 and Q-6. Rule 530 Schedules A-5, B-3, B-7, C-1, E-2, E-3, H-1, H-2, H-3, H-7, and P-12 are filed in executable electronic format and are included as part of the cost of service fully functional model, which I describe in more detail later in my testimony.

Q. Are you also sponsoring any exhibits as part of your direct testimony?

A. Yes, I am sponsoring PNM Exhibits RNG-1 through RNG-17 as detailed in the index to my testimony.

II. SUMMARY OF PNM REVENUE REQUIREMENTS

Q. What Test Period and Base Period did PNM use to develop the revenue requirements supporting the Company's rate request in this proceeding?

A. The Test Period used to determine the revenue requirements for the rates requested by PNM in this proceeding is the 12-month period ending September 30, 2028 ("Test Period"). The Base Period is the 12 calendar months ending June 30, 2026 ("Base Period") and consists of a full 12 months of actual Company books and records data. Certain adjustments, as described in detail below, are made to the Base Period, to form the "Adjusted Base Period." The Adjusted Base Period forms the basis from which the Test Period revenue requirement was developed.

Q. Please summarize the development of the revenue requirements underlying the requested rates.

A. The revenue requirements were developed in accordance with the FTY Rule and the applicable provisions of Rule 530. The Test Period rate base is based on a 13-month average of projected balances, beginning September 2027, through September 2028. The operating expenses are based on the projected 12 months ending September 30, 2028.

Q. How are the Base Period, Adjusted Base Period, and Test Period cost of service studies presented in the Company's rate docket filing?

A. PNM Exhibits RNG-2, RNG-3, and RNG-4, together, constitute the cost of service model and instructions, supporting the revenue requirements and revenue increase requested by PNM in this case.

- PNM Exhibit RNG-2 provides operating instructions on how users may utilize the electronic files for the cost of service model included with this filing.
- PNM Exhibit RNG-3 provides the Unadjusted Base Period cost of service, adjustments made to derive the Adjusted Base Period cost of service, as well as the Test Period cost of service.
- PNM Exhibit RNG-4 provides the detailed electronic workpapers used to develop the Adjusted Base Period and the Test Period cost of service that is provided in PNM Exhibit RNG-3.

PNM Exhibits RNG-3 and RNG-4 are being provided electronically through a secured file sharing site, so the amounts in the schedules and workpapers can be easily traced back to the source. The assumptions used to develop the Test Period revenue requirement are also included in the working electronic files. These two exhibits comply with the fully functional executable filing requirement in the Commission's FTY Rule. Refer to section VI.A of my testimony for further discussion of the model functionality.

Q. Please explain the methodology used to develop the Test Period revenue requirement.

A. The Test Period revenue requirement was developed beginning with the Adjusted Base Period. PNM developed the Test Period operating expenses and revenue credits by using escalation rates or by estimating items based on specific assumptions. PNM used specific forecasts when contracts, actuarial projections, budgets, project information, or other cost-specific support provided a more reliable estimate. General escalation rates were used for applicable recurring costs that were not separately forecasted and were not applied in addition to a specific forecast for the same cost. In addition, capital additions and certain capital-related items were based on July 2026 through September 2028 budget information, and PNM has provided the required documentation for these items under the Commission's FTY Rule. PNM's cost of service study, along with the cost comparisons and variance explanations required under the FTY Rule, are presented based on the accounts prescribed under the Federal Energy Regulatory Commission ("FERC") Uniform System of Accounts ("USOA"), including cost elements, as applicable.

Q. When were PNM's current rates established?

A. PNM's current rates were established in PNM's 2024 Rate Case. Rates became effective in two phases, with the first phase effective July 1, 2025, and the second phase effective April 1, 2026.

Q. What are the drivers to PNM's change in revenue requirements from the 2024 Rate Case?

A. Please see PNM Table RNG-2 below for the primary changes to PNM's revenue requirements.

PNM Table RNG-2
Summary of Revenue Requirement Changes

	Amount (in Millions)
Core Investments to Harden, Improve and Expand the Electric System	$ 86.7
Renewable Energy and Energy Storage	89.6
Grid Modernization	56.0
Cost of Capital - ROE, Capital Structure, and Cost of Debt	31.1
O&M Increases and Other	54.4
Income Tax Credits Fully Returned to Customers (Excess Deferred)	18.8
Fuel Related Costs Reclassified from Base Rates	25.6
Load Growth Revenue Offset	(76.0)
Total Requested Rate Relief	**$ 286.3**

Q. Please briefly describe the changes listed in the table above.

A. Core investments to harden, improve and expand the electric system reflect the return on, return of (depreciation), and taxes associated with approximately $604.5 million of rate base growth. These investments are discussed in more detail later in my testimony and by PNM witnesses Wesley W. Gray, Jesus Flores-Olivas, Andrea Sanchez, and Dr. Tobe C. Phelps.

Renewable Energy and Energy Storage investments reflect the return on, return of (depreciation), and taxes associated with approximately $361.8 million of rate base growth, offset by investment tax credits for solar and battery capital investments.

These investments are discussed in more detail later in my testimony and by PNM witnesses Gray, Flores-Olivas, Sanchez, and Phelps. Applicable investment tax credits are discussed in more detail later in my testimony and by PNM witness Larry T. Morris.

Grid Modernization reflects the inclusion of the Grid Mod rider related costs in base rates as discussed previously in my testimony. The total revenue requirement includes the return on, return of (depreciation), and taxes associated with approximately $189.7 million of rate base growth as well as $14.6 million of operation and maintenance expenditures, and $4.3 million of regulatory asset amortization. The investments and operation and maintenance expenditures are discussed in more detail in the testimony of PNM witness Gray. Amortization of the regulatory asset is discussed in more detail later in my testimony.

The cost of capital increase reflects changes to the ROE, the capital structure and the cost of debt. These elements of PNM's cost of service are addressed by PNM witnesses Adrien M. McKenzie and Kishor S. Agrawal. The impacts of each component are discussed in more detail later in my testimony.

O&M Increases and Other in PNM Table RNG-2 reflect the escalations on labor and non-labor O&M and other requested O&M programs as discussed PNM witnesses Gray, Flores-Olivas, Phelps and Alaric J. Babej.

Income Tax Credits fully returned to customers reflects the Excess Deferred Federal Income Tax Regulatory Liability that is fully returned to customers during the Test Period. Refer to PNM witness Morris for further discussion.

Fuel related costs reclassified from base rates reflects revenue relative to PNM's entrance into the EDAM market that is proposed to be recovered through the fuel clause. Further discussion of the EDAM revenue proposal is discussed in more detail later in my testimony.

Load Growth Revenue Offset in PNM Table RNG-2 reflects the increases in PNM's revenue at existing rates as a result of increases in customers and customer usage.

Q. What changes are PNM proposing with respect to its cost of capital and capital structure in the case?

A. There are three proposed changes from PNM's 2024 Rate Case:

1. An increase to PNM's currently authorized ROE of 9.45% to the requested ROE of 9.90%, which results in a $13.3 million increase.
2. A 52.0% equity layer component of capital structure compared to a 51% equity layer within PNM capital structure which results in a $2.9 million increase.

3. A 4.97% cost of debt compared to 4.24% cost of debt which results in a $14.9 million increase.

III. Base Period and Adjusted Base Period Cost of Service

Q. What period was used to develop the Base Period and Adjusted Base Period revenue requirements?

A. The Base Period reflects PNM operations for the 12-month calendar period that ended June 30, 2026.

Q. How were PNM's books and records utilized in the preparation of this rate case?

A. All unadjusted Base Period data used in the filed schedules, workpapers and electronic models are from the Company's books and records. PNM Exhibit RNG-3 COS BASE ADJ presents the unadjusted Base Period and a summary of adjustments made to the Base Period to develop the Adjusted Base Period revenue requirements. The adjustments are developed in supporting workpapers included in PNM Exhibit RNG-4 and discussed later in my testimony.

B. Accounting Books and Records and Jurisdictional Allocations

i. Accounting Books and Records

Q. Were PNM's books and records utilized to develop the Base Period in this rate case?

A. Yes. The unadjusted Base Period data include PNM's production, transmission, distribution, and administrative and general operations. PNM also incurs costs from Shared Services, which provides administrative and other necessary support services to PNM.

PNM's books and records have been maintained and provided in compliance with the USOA as prescribed by the Commission. The accounting firm of KPMG LLP performs external auditing services for PNM and was engaged to perform the independent review in this rate docket and provided the opinion as required by Commission Rule 530 Schedule Q-6.[2]

Q. Please explain how PNM develops and maintains its accounting books and records.

A. The Company develops and maintains its accounting books and records in compliance with the USOA prescribed for public utilities by FERC, as required by 17.3.510.10 NMAC. Additionally, books and records are maintained in accordance with generally accepted accounting principles ("GAAP"). The Company's financial statements are subject to quarterly reviews and annual audits by the Company's external auditor, KPMG LLP.

[2] 17.9.530.14(Q)(6) NMAC ("Schedule Q-6: Opinion of independent public accountants: To satisfy the requirements of this schedule the applicant shall submit a copy of the opinion of its independent certified public accountant stating that an independent examination of the book amounts and accounting adjustments thereto of the applicant utility company's books and records has been made for the Base Period, as defined herein, and that the results thereof are in all material respects in compliance with the Uniform System of Accounts prescribed by the New Mexico Public Service Commission [New Mexico Public Regulation Commission].").

Administratively, the Company maintains its accounting books and records in various integrated computer software programs including PeopleSoft (general ledger, accounts payable, payroll), PowerPlan (asset management), Banner (retail billing), work order management systems, and various other applications.

Q. What are the key components of the Company's accounting structure?

A. The key components of the Company's accounting structure include FERC account, cost type, and location. The Company's FERC account is a six-digit numerical value based on the USOA. For example, FERC account 101000 is electric plant in-service and is based on USOA account 101.

Cost types identify specific types of costs incurred consistent with the term "elements of cost" as defined in 17.1.3 NMAC, the FTY Rule. These include cost types such as: labor, materials and outside services. Location is used to identify costs by physical locations associated with PNM facilities, or by a general area of the Company to allow recording of expenses that are not identifiable by a specific location. Additionally, PNM utility common locations and Shared Services locations are used to record transactions to perform certain allocations, which is discussed in more detail below. Please see PNM Exhibit RNG-5 for the list of cost types and locations used by the Company.

Q. What costs are allocated to PNM from its affiliated companies?

A. Costs incurred by TXNM or Shared Services are allocated to PNM based on the locations and parameters outlined in the Cost Allocation Manual ("CAM") and are reflected as Administrative and General ("A&G") expenses. In addition, certain utility plant assets that are reflected on the accounting records of either TXNM or Shared Services, including the TXNM headquarters building in Albuquerque and computer software and hardware, are allocated to PNM based on the parameters set forth in the CAM. Because these assets are not recorded on the financial books and records of PNM, the allocated investments in these assets, related Accumulated Deferred Income Taxes ("ADIT"), and associated operating expenses, are reflected through adjustments to the Base Period. Consistent with past PNM rate cases, the allocated costs related to these assets are included in the revenue requirements as they are necessary for PNM to provide electric service to its customers.[3] PNM utilized the 2026 CAM for associated months in the linkage and used the 2027 CAM for 2027 and 2028 in the linkage data and Test Period. Please see PNM Exhibit RNG-6 for the allocations from PNM's 2026 CAM as filed with the Commission and PNM's 2027 CAM to be filed with the Commission on or before December 31, 2026. PNM revises the allocation percentages contained in the CAM on an annual basis and files the revised CAM with the Commission in Docket No.

[3] *See, e.g.,* Case No. 22-00270-UT, Direct Testimony of Kyle T. Sanders, at 84:15-85:2; Case No. 16-00276-UT, Direct Testimony of Henry E. Monroy, at 11:16-12:7; Case No. 15-00261-UT, Direct Testimony of Henry E. Monroy, at 10:17-11:8.

03-00017-UT; PNM will submit its annual compliance filing for the 2027 CAM on or before December 31, 2026.

ii. Jurisdictional Allocators

Q. What PNM allocation categories are included in the Adjusted Base Period and Test Period revenue requirements?

A. The total PNM revenue requirement is allocated among the following categories:

- PNM Base Rate – PNM's Base Rate jurisdiction ("Base Rate") includes retail and Grid Mod allocation categories. The retail allocation refers to retail customers, which include: residential, commercial, industrial, and other public authority customers that receive retail electric service from PNM in New Mexico ("Retail"). The Grid Mod allocation includes cost components provided for in the application and final order of the Grid Mod Case No. 22-00058-UT. PNM's Rate Base jurisdiction comprises the revenue requirements associated with the rates for which PNM is requesting Commission approval in this proceeding.
- Renewables – This category covers all cost components associated with compliance with the Public Utility Act's Renewable Portfolio Standard, including: rate base, purchased power, operating expenses, income tax credits, and return that PNM is entitled to collect under Rider No. 36 – Renewable Energy Rider ("Rider No. 36") and Rider No. 30 – Voluntary Renewable Energy Program ("Renewables").

- FERC Wholesale Transmission – FERC wholesale transmission customers include those who take network transmission service and long-term firm point-to-point service ("FERC Wholesale Transmission"). For example, costs and investments associated with the Western Spirit transmission line are allocated to this jurisdiction.
- Excluded – This category includes costs not otherwise allocated ("Excluded"). There are currently no costs allocated to the Excluded category in the Base Period or Test Period.

Q. How are costs allocated among the various categories in the cost of service?

A. Most allocations between the PNM Retail category of the Base Rate jurisdiction and the FERC Wholesale Transmission jurisdiction are based on customer demand, customer energy, and plant-related values. Costs and investments associated with the FERC incremental rate investments, such as the Western Spirit transmission line, are direct assigned to the FERC Wholesale Transmission jurisdiction. A separate allocation has been maintained for Grid Mod specific costs to maintain transparency and allow for a clear comparison to Grid Mod plan filings. All PNM Retail and Grid Mod allocated costs have been included in the Base Rate jurisdiction total. Costs allocated to the Renewables category are typically directly assigned based on the costs associated with those resources. However, certain indirect costs – e.g., general and intangible plant ("G&I") and A&G expenses – are

allocated based on specific allocators shown in PNM Exhibit RNG-3 COS BASE and PNM Exhibit RNG-3 COS TEST.

Q. How were the allocators for generation demand, energy and transmission demand calculated for PNM's Retail and FERC Wholesale Transmission customers?

A. PNM used the same allocation methodology previously accepted by the Commission in the 2024 Rate Case. The generation demand and energy allocators result in 100% allocation to PNM Retail, as PNM no longer has FERC wholesale generation customers. The allocators were calculated as follows:

- Generation Demand: Based on a 12-month average coincident peak ("12 CP") demand calculation on the generation system ("Generation Demand").
- Generation Energy: Based on 12 months of energy.
- Transmission Demand: Based on a 12 CP demand on the transmission system ("Transmission Demand"), which due to the heavy third-party use of PNM's transmission system, will often occur at a different hour or day from the Generation Demand peak. PNM Retail customers and FERC Wholesale Transmission customers (excluding FERC incremental rate customers) are allocated costs on a 12 CP allocator based on their system peak. Long-term firm point-to-point customers under PNM's Open Access Transmission Tariff ("OATT") are allocated costs based on their contract

reservations, regardless of their use coincident with the transmission system peak hour.

A summary of the generation demand and energy, and transmission demand allocators for the Adjusted Base Period is included in PNM Exhibit RNG-4 WP AL-1.

C. Rate Base Adjustments to Base Period

Q. Has PNM prepared a summary of the adjustments made to develop the Adjusted Base Period rate base?

A. Yes. Please see PNM Exhibit RNG-3 COS BASE ADJ for a summary of adjustments proposed to the unadjusted Base Period to derive the Adjusted Base Period. Please refer to PNM witness Morris's testimony for a discussion of ADIT adjustments used to derive the Adjusted Base Period. The other adjustments are further described below.

i. Net Plant-in-Service

Q. Please summarize the adjustments that were made to Net Plant-in-Service.

A. PNM made four Base Period adjustments to the Net Plant-In-Service balances as of June 30, 2026. First, PNM reflected the impairment on Four Corners Power Plant ("Four Corners") as a result of the final order in the 2022 Rate Case. Next, PNM removed balances associated with Palo Verde Nuclear Generating Station ("Palo

Verde") Asset Retirement Costs. Then, PNM reclassed the balances of plant related to Palo Verde Unit 2 leased capacity to the regulatory assets as approved in the 2022 Rate Case. Last, PNM reflected the inclusion of assets held by Shared Services and TXNM that are allocated to PNM. Please see PNM Exhibit RNG-4 WP Plant-Net Plant Workpaper – WP Plant 1 for a summary of Base Period adjustments. PNM Table RNG-3 below provides a summary of these Base Period adjustments.

PNM Table RNG-3
Summary of Net Plant In-Service
Base Period Adjustments

PNM Exhibit RNG-4, WP Plant - Net Plant Workpaper Reference	Four Corners Impairment	Remove PV Asset Retirement Costs Note 2	PVNGS Unit 2 Leased Capacity Adjustments	Shared Service Allocation	Total Base Period Adjustments
Gross Plant Adjustment (Schedule B-3)	$ (77,948,340)	$ (12,831,931)	$ (1,042,150)	$ (94,508,872)	$ (186,331,292)
Accumulated Depreciation Adjustment (Schedule C-1a)	-	(3,101,067)	-	(50,290,088)	(53,391,156)
Net Plant Adjustment (WP Plant-1)	$ (77,948,340)	$ (15,932,998)	$ (1,042,150)	$ (144,798,960)	$ (239,722,448)

ii. Regulatory assets and liabilities

Q. Please summarize the adjustments that were made to regulatory assets and liabilities.

A. PNM made four Base Period adjustments to regulatory assets and liabilities. First, PNM removed regulatory assets (identified in the table below) that are not recovered in PNM's base rates but are recovered through other rate mechanisms.[4] Second, PNM removed regulatory assets associated with the Grid Mod Rider that

[4] These regulatory assets are Sky Blue Under Recovery, Transportation Electrification Program ("TEP"), and the Grid Mod Rider for 2025 and 2026.

are not recovered in PNM's base rates. Third, PNM removed the remaining balance associated with the Coal Mine Decommissioning regulatory asset, as PNM has already collected an allowable amount for the surface mine reclamation. Lastly, PNM removed the regulatory asset for the undepreciated investments in Palo Verde and the regulatory asset associated with San Juan Generating Station ("San Juan or "SJGS") decommissioning under San Juan County Ordinance 121, as these do not receive a return on rate base. Please see PNM Exhibit RNG-4 WP RA-1 for the referenced adjustments. PNM Table RNG-4 below provides a summary of the adjustments.

PNM Table RNG-4
Summary of Regulatory Assets and Liabilities
Base Period Adjustments

Regulatory Asset/Liability (PNM Exhibit RNG-4, WP RA-1)	Removal of Regulatory Assets not Subject to Base Rates	Removal of Grid Mod	Removal of SJGS Final ETA Decomissioning	Removal of PVNGS Reg Assets with No Return On	Removal of SJGS Decommission Reg Asset with No Return On	Total Base Period Adjustments
Sky Blue Under Recovery	(184,424)					(184,424)
Transportation Electrification Program (TEP)	(10,610,935)					(10,610,935)
Grid Mod 2025		(6,018,222)				(6,018,222)
Grid Mod 2026		(5,422,994)				(5,422,994)
SJGS Final ETA Decom			(2,624,415)			(2,624,415)
COVID Regulatory Asset and Liability						-
PVNGS Unit 1 - 104MW Undepreciated Investment Post - lease renewal				(32,930,390)		(32,930,390)
PVNGS Unit 2 - 10MW Undepreciated Investment Post - lease renewal				(2,955,398)		(2,955,398)
SJGS County Ordinance Decommission					(16,027,369)	(16,027,369)
SJGS Final ETA Mine Rec					(26,766,063)	(26,766,063)
Total Regulatory Assets/Liability Adjustments	$ (10,795,359)	$ (11,441,216)	$ (2,624,415)	$ (35,885,789)	$ (42,793,432)	$ (103,540,211)

iii. Other rate base adjustments

Q. Please summarize the adjustments that were made to other rate base items.

A. Please see PNM Exhibit RNG-4 WP ORB-1 for a summary of Base Period adjustments made to other rate base items. These adjustments include the following:

- *Eliminated balances recorded in Retirement Work In-Progress ("RWIP") and Construction Work In-Progress ("CWIP")*: Pursuant to the FTY Rule, PNM does not intend to seek recovery of CWIP balances in the Test Period; therefore, PNM has eliminated these balances.
- *Removed Palo Verde Asset Retirement Obligation ("ARO") balances:* Palo Verde AROs are removed from rate base, as ultimate decommissioning costs associated with Palo Verde are funded through an external trust. This is consistent with the treatment followed in PNM's prior rate cases.[5]
- *Removed Palo Verde Dry Cask Storage balances:* The balances on June 30, 2026, reflect a non-cash liability on the books and records of PNM; therefore, the balances are removed from the cost of service. This is consistent with the treatment followed in PNM's prior rate cases.[6]
- *Removed ARO liability associated with San Juan:* PNM removed the ARO Liability related to San Juan, consistent with the treatment followed in PNM's prior rate cases.[7]
- *Thirteen-month adjustment to Injuries and Damages and Customer Deposit balances:* PNM calculated a thirteen-month average for Injuries and Damages and Customer Deposits based on the Base Period data. PNM does not anticipate

[5] *See, e.g.,* Case No. 24-00089-UT, Direct Testimony of Kyle T. Sanders, at 20:10-13; Case No. 22-00270-UT, Direct Testimony of Kyle T. Sanders, at 17:14-20; Case No. 16-00276-UT, Direct Testimony of Henry E. Monroy, at 23:4-7; Case No. 15-00261-UT, Direct Testimony of Henry E. Monroy, at 19:2-7.
[6] *See, e.g.,* Case No. 24-00089-UT, Direct Testimony of Kyle T. Sanders, at 20: 14-17; Case No. 22-00270-UT, Direct Testimony of Kyle T. Sanders, at 20:11-14; Case No. 16-00276-UT, Direct Testimony of Henry E. Monroy, at 23:8-11; Case No. 15-00261-UT, Direct Testimony of Henry E. Monroy, at 20:1-7.
[7] *See, e.g.,* Case No. 24-00089-UT, Direct Testimony of Kyle T. Sanders, at 21:1-3; Case No. 22-00270-UT, Direct Testimony of Kyle T. Sanders, at 21:3-4.

any significant changes to these balances; therefore, the thirteen-month average of the Base Period reflects the expected Test Period balance.

Please see PNM Table RNG-5 below for a summary of the Other Rate Base adjustments.

PNM Table RNG-5
Summary of Other Rate Base
Base Period Adjustments

Other Rate Base Items (PNM Exhibit RNG-4, WP ORB-1)	Remove CWIP & RWIP	Remove PV ARO Balances	Remove PV Dry Cask Storage Balances	Remove SJGS ARO Liability	Customer Deposits and Injuries & Damages	Total Base Period Adjustments
RWIP-Production	$ (6,552,229)					$ (6,552,229)
RWIP-Transmission	(2,878,140)					(2,878,140)
RWIP-Distribution	(21,107,981)					(21,107,981)
CWIP - Production	(197,459,052)					(197,459,052)
CWIP - Transmission	(80,820,469)					(80,820,469)
CWIP - Distribution	(119,070,803)					(119,070,803)
ARO Liability - Production		198,556,752		22,261,284		220,818,036
ARO Liability - 65MW SJGS				397,617		397,617
Palo Verde Dry Cask Storage			16,373,033			16,373,033
Customer Deposits					175,921	175,921
Injuries and Damages PNM					588,407	588,407
Total Other Rate Base Adjustments	**$(427,888,675)**	**$ 198,556,752**	**$ 16,373,033**	**$ 22,658,901**	**$ 764,328**	**$(189,535,661)**

iv. Working capital

Q. Please summarize the adjustments that were made to PNM's working capital.

A. PNM made the following Base Period adjustments to working capital balances. First, PNM reflected a 13-month average balance. Then, PNM removed balances associated with San Juan, given that the plant has been retired. Lastly, PNM adjusted the Transmission Right of Way ("ROW") prepayments to reflect the balance associated with actual cash prepayments. See PNM Exhibit RNG-4 WP WC-1, Column C. PNM Table RNG-6 below provides a summary of the Base Period working capital adjustments.

PNM Table RNG-6
Summary of Working Capital
Base Period Adjustments

Working Capital (PNM Exhibit RNG-4, WP WC - Working Capital Workpaper)	13-Month Average	Remove SJGS Balances	ROW Cash Payment	Total Base Period Adjustments
Plant Materials and Supplies (Schedule E-2)	$ (525,231)			$ (525,231)
Prepayments (Schedule E-2)	(3,890,827)	(65,193)	2,026,624	(1,929,396)
Fuel Stock (Schedule E-3)	71,278			71,278
Nuclear Fuel (Schedule B-7)	(1,480,523)			(1,480,523)
Total Working Capital Adjustments	**$ (5,825,304)**	**$ (65,193)**	**$ 2,026,624**	**$ (3,863,873)**

In addition, based on the results of the lead-lag study, attached to my testimony as PNM Exhibit RNG-7, PNM has included $2.9 million as a cash working capital adjustment in the Base Period. See Rule 530 Schedule E-1 for the calculation of the cash working capital allowance.

D. Fuel related adjustments to Base Period

Q. Please summarize the adjustments that were made to Base Period fuel (FPPCAC) expenses to develop the adjustments to the Base Period.

A. Please see PNM Exhibit RNG-4 WP Fuel – 1 for a summary of the Base Period adjustments made to fuel-related expense.

Q. Has the Company removed coal mine reclamation expenses associated with San Juan?

A. Yes. PNM removed the surface and underground coal mine decommissioning expenses recorded in the unadjusted Base Period, as San Juan has been retired. However, PNM has included a regulatory asset for San Juan coal mine reclamation

expense in excess of the Energy Transition Act ("ETA") bonds, which I address in more detail later in my testimony.

Q. Why have you reclassified the purchased power cost associated with PNM's Economy Service customer to revenue credits in the Base Period?

A. PNM acquires purchased power to serve the needs of an Economy Service customer. These purchased power costs are directly charged to the Economy Service customer at cost. The revenues associated with the Economy Service customer are shown as a revenue credit in the cost of service. These purchase power costs are reclassified to revenue credits and netted with the revenues received from the customer to derive the appropriate revenue credit. This treatment is consistent with previous rate case flings.[8] Please see PNM Exhibit RNG-4 WP Revenue Credits-1.

Q. How has PNM accounted for EDAM revenues?

A. PNM has reclassified base period retail share of Point-to-Point ("PTP") transmission revenue and real power losses from revenue credits to fuel for a comparable basis to the EDAM revenues forecasted in the test period. I discuss EDAM revenue in greater detail later in my testimony.

[8] *See, e.g.,* Case No. 22-00270-UT, Direct Testimony of Kyle T. Sanders, at 23:14-24:2; Case No. 16-00276-UT, Direct Testimony of Henry E. Monroy, at 28:16-29:2; Case No. 15-00261-UT, Direct Testimony of Henry E. Monroy, at 20:1-7.

E. O&M adjustments to Base Period

Q. Please summarize the adjustments that were made to Base Period O&M expenses to develop the Adjusted Base Period.

A. Please see PNM Exhibit RNG-4 WP OM-3 for a summary of the Base Period adjustments made to O&M expense. These adjustments include the following:

- Normalized planned outage expenses to remove outage costs associated with Palo Verde leased capacity and Four Corners. Additionally, PNM normalized outage expenses associated with PNM's other generation facilities based on a six-year historical average. See PNM Exhibit RNG-4 WP OM-7. Please refer to the testimony of PNM witness Gray for further discussion of planned outages for PNM's generation facilities.
- Adjusted the expenses allocated from Shared Services as discussed in more detail below.
- Annualized and normalized labor expenses to reflect the current active positions and current salaries as of June 19, 2026, (the last payroll period in the Base Period). See PNM Exhibit RNG–4 WP LA-1. Adjusted Base Period labor was based on the last pay period of June 19, 2026, in the Base Period.
- Normalized the retiree pension and medical expense to remove the portion of retiree pension expense that is attributed to employees formerly employed by Gas Operations when PNM owned a gas utility. See PNM Exhibit RNG-4 WP OM-5.

- Removed expenses associated with PNM's Solar Direct program from the Base Period, as these costs are collected through Rider No. 50. See PNM Exhibit RNG-4 WP OM-3, Column G.
- Removed energy efficiency expenses from the Base Period, as these costs are recovered under PNM's Energy Efficiency Rider No. 16. See PNM Exhibit RNG-4 WP OM-3, Column H.
- Removed expenses associated with PNM's Transportation Electrification Program ("TEP") from the Base Period, as these costs are collected through Rider No. 53. See PNM Exhibit RNG-4 WP OM-3, Column I.
- Adjusted transmission O&M expenses by the imputed value of a transmission service exchanged with Western Area Power Administration ("WAPA") to reflect the 134 MW of transmission capacity provided to PNM by WAPA to deliver a portion of the Palo Verde output to New Mexico at Four Corners as approved in Case No. 07-00077-UT ("2007 Rate Case"). This is consistent with the treatment followed in prior PNM rate cases.[9] See PNM Exhibit RNG-4 WP-OM-8. Please refer to the testimony of PNM witness Gray for further discussion of these agreements.
- Removed certain legal expenses from the Base Period not allowable under the Commission's ratemaking policies, or for which the Company otherwise has elected to not seek recovery. See PNM Exhibit RNG-4 WP OM-3,

[9] *See, e.g.,* Case No. 24-00089-UT, Direct Testimony of Kyle T. Sanders at 25:16-26:6; Case No. 22-00270-UT, Direct Testimony of Kyle T. Sanders, at 25:12-19; Case No. 16-00276-UT, Direct Testimony of Henry E. Monroy, at 31:20-32:4; Case No. 15-00261-UT, Direct Testimony of Henry E. Monroy, at 22:22-23:7.

Column K for the adjustment and see PNM Exhibit RNG-8 for further discussion of legal expenses.

- Annualized expenses for Transmission by others to capture updated OATT rates from contract renewals that occurred in January 2026. See PNM Exhibit RNG-4, WP OM-3, Column L and WP OM-17.
- Removed one-time non-recurring expenses and miscellaneous write-off expenses to normalize the Adjusted Base Period. See PNM Exhibit RNG-4, WP OM-3, Columns M and R.
- Reclassified O&M expenses associated with PNM's FERC Wholesale Transmission customers on incremental rates. This adjustment reclasses the O&M expenses associated with these contracts (Western Spirit and High Lonesome Mesa) for allocation purposes, so PNM Retail does not pay for the costs which are properly allocated to the FERC Wholesale Transmission jurisdiction. See PNM Exhibit RNG-4 WP OM-3, Column N.
- Removed membership dues and subscriptions pursuant to Rule 17.3.350.10(C) NMAC. See PNM Exhibit RNG-4 WP OM-12.
- Normalized the Base Period expense related to the Navajo ROW to reflect the expense and payments made as of April 2026 during the Base Period. See PNM Exhibit RNG-4 WP OM-14.
- Removed San Juan O&M costs incurred in the Base Period. Please see PNM Exhibit RNG-4 WP OM-3, Column Q. Removed all costs related to the

proposed merger transaction between TXNM and Blackstone Infrastructure. Please see PNM Exhibit RNG-4 WP OM-3 Column S.

- Removed Grid Mod costs incurred in the Base Period as 2025 and 2026 costs are to be recovered in the Grid Mod Rider. Please see PNM Exhibit RNG-4 WP OM-3, Column T.

Q. Please summarize the adjustments that were made to Shared Services O&M expenses to develop the Adjusted Base Period O&M expenses.

A. PNM made two types of adjustments to O&M expenses related to Shared Services. For a summary of these adjustments please refer to PNM Exhibit RNG-4 WP SS – 2.

First, PNM reclassified depreciation expense, payroll taxes, property taxes, and certain revenue credits recorded by Shared Services that are recorded as A&G expenses on PNM's books and records, to the applicable sections in the cost of service to ensure these costs are allocated appropriately.

Second, PNM made the following expense adjustments to the Base Period to develop the Adjusted Base Period for Shared Services O&M:

- Removed other income and deductions recorded by Shared Services that are allocable to PNM. PNM does not include these non-operating activities in its determination of revenue requirements.

- Eliminated the billings recorded on Shared Services. This adjustment was made to eliminate the credit recorded to Shared Services reflecting the billing of these costs to PNM. This elimination does not impact the cost of service but was made for presentation purposes on PNM Exhibit RNG-4 WP SS – 2.
- Removed membership dues and subscriptions pursuant to Rule 17.3.350.10(C) NMAC. See PNM Exhibit RNG-4 WP SS-11.
- Removed non-recurring expenses that were recorded during the Base Period to normalize the Adjusted Base Period.
- Removed the portion of incentive compensation not being requested in this proceeding, as discussed by PNM witness Angela L. Pino. See PNM Exhibit RNG-4, WP SS-10 for additional information on incentive compensation.
- Removed non-allowable legal and advertising expenses recorded by Shared Services.
- Annualized labor expenses to reflect the current active positions and current salaries as of June 19, 2026, (the last payroll period in the Base Period). See PNM Exhibit RNG-4 WP LA-5.
- Removed all costs related to the proposed merger transaction between TXNM and Blackstone Infrastructure.
- Annualized and normalized labor expenses to reflect the current active positions and current salaries as of June 19, 2026, (the last payroll period in the Base Period). See PNM Exhibit RNG–4 WP LA-5. Adjusted Base

Period labor was based on the last pay period of June 19, 2026, in the Base Period.

F. Depreciation Adjustments to Base Period

Q. Did PNM annualize depreciation expenses at the end of the Adjusted Base Period?

A. Yes. PNM annualized the depreciation expense to develop the Adjusted Base Period depreciation expense by multiplying the June 30, 2026, Base Period gross plant balances by the depreciation rates approved in the 2022 Rate Case. PNM annualized the depreciation expense to provide a more meaningful linkage between the Adjusted Base Period depreciation expense and the Test Period depreciation expense. In addition, PNM adjusted depreciation expense to reflect the changes described earlier to Net Plant-In-Service. See Rule 530 Schedule H-7 for a summary of Base Period adjustments.

Q. Did PNM annualize depreciation for all assets at the end of the Adjusted Base Period?

A. No. PNM did not attempt to annualize depreciation on assets in Computer Software FERC Accounts, as these assets are depreciated on an individual asset level. PNM also did not annualize depreciation on Asset Retirement Cost ("ARC") Assets because these assets are depreciated using the straight-line method.

G. General tax adjustments to Base Period

Q. Please summarize the adjustments that were made to general tax expenses to develop the Adjusted Base Period O&M expenses.

A. Please see PNM Exhibit RNG-4 WP GT-1 for a summary of Base Period adjustments made to general tax expense. These adjustments include the following:

- *Elimination of Inspection and Supervision ("I&S") fees* – I&S fees are derived by multiplying the requested revenue requirements by the I&S rate, grossed up for income taxes. PNM removed the current I&S fees that were recorded in the Base Period within PNM Exhibit RNG-4 WP GT-1 and included the recalculated value in the Adjusted Base Period revenue requirement. See PNM Exhibit RNG-3 COS BASE for the calculation of I&S fees based on the Adjusted Base Period revenue requirement.
- *Elimination of gross receipts and franchise taxes true-ups recorded in the Base Period* – PNM removed these amounts, as these taxes are collected outside of base rates.
- *Elimination of compensating tax refund recorded in the Base Period* – PNM removed these amounts as these relate to a one-time refund that is not expected to recur.
- *Normalization of payroll tax expense* – PNM normalized the payroll tax expense based on the Base Period adjustments associated with labor and incentive compensation as discussed earlier in my testimony.

- *Inclusion of property and payroll tax expense from Shared Services* – As discussed earlier in my testimony, PNM reflected the allocated share of property and payroll tax expense from Shared Services in general tax expense for cost of service allocations.
- *Removed property tax associated with San Juan* – PNM removed property taxes associated with the retired San Juan plant balances.

H. Income tax adjustments to Base Period

Q. What adjustments were made related to income tax expense for purposes of the Adjusted Base Period.

A. PNM made certain income tax expense adjustments to properly reflect an Adjusted Base Period. Please refer to the testimony of PNM witness Morris for discussion of adjustments made to federal and state income tax expense.

I. Revenue Credit Adjustments to Base Period

Q. Please summarize the adjustments that were made to Base Period revenue credits to develop the Adjusted Base Period.

A. Please see PNM Exhibit RNG-4 WP Revenue Credits – 1 for a summary of adjustments made to Base Period revenue credits. These adjustments include the following:

- *Inclusion of revenue credits from Shared Services* – As discussed earlier in my testimony, PNM reflected the allocated share of revenue credits applicable to PNM from Shared Services for cost of service allocations.
- *Reclassed Retail share of transmission revenues related to EDAM revenues to Fuel* – Refer to EDAM section discussed previously in my testimony for further detail on EDAM revenues and justification of their recovery through fuel.

J. Other Miscellaneous Adjustments to Base Period

Q. What capital structure and cost of capital was used in the determination of the Adjusted Base Period revenue requirements?

A. As discussed by PNM witness Agrawal, the capital structure used in the determination of Adjusted Base Period revenue requirements is PNM's actual capital structure as of June 30, 2026. The ROE used in the Adjusted Base Period is 9.45%, as approved by the Commission in the 2024 Rate Case. PNM used its actual embedded cost of debt of 4.29% for the debt component of the capital structure. Please see Rule 530 Schedule A-5 for the capital structure and cost of capital used by PNM in the Base Period.

Q. Has PNM adjusted the Base Period return on rate base to account for the debt only return on certain regulatory assets and liabilities for capital investments?

A. Yes. PNM included an adjustment to the total return on rate base to reflect the debt only return on certain regulatory assets and liabilities consistent with the final

orders in the 2022 Rate Case, 2024 Rate Case and the San Juan abandonment and financing proceeding, Case No 19-00018-UT.

IV. TEST PERIOD REVENUE REQUIREMENTS

Q. Please describe generally how PNM developed the Test Period revenue requirements.

A. The Test Period reflects PNM's projected operations for the twelve-month period ending September 30, 2028. The Test Period was developed through estimates and certain information in PNM's Annual Operating Plan ("AOP") related to capital investments and associated capital loads. A detailed discussion of the methodologies used to develop the amounts included in the Test Period revenue requirements is presented below. As required under the FTY Rule, 17.1.3.12(D) NMAC, PNM included the required linkage data from the Adjusted Base Period to the Test Period revenue requirements in the workpapers supporting the cost of service. The details of the capital investments are provided by PNM witnesses Gray, Flores-Olivas, Sanchez and Phelps.

A. Rate Base

Q. Is PNM proposing to use an average rate base in the development of its Test Period revenue requirement in this case?

A. Yes. Pursuant to 17.1.3.16(C)(1) NMAC, because the Future Test Period begins at least twelve months after the end of the Base Period, an average rate base is required

to be used, utilizing the projected thirteen-month average of the future Test Period. PNM developed its Test Period rate base using a projected thirteen-month average of balances starting September 30, 2027, through September 30, 2028, which is the end of the Test Period.

Q. Please describe the adjustments that were made to the Test Period cost of service study.

A. The rate base adjustments made in the Test Period cost of service study include adjustments to Net Plant In-Service, ADIT, Regulatory Assets and Liabilities, Other Rate Base Items, and Working Capital. Please refer to the testimony of PNM witness Morris for a discussion of ADIT included in the Test Period revenue requirements. The other adjustments are further discussed below.

Q. What is the Test Period rate base that is used to create the Company's Test Period revenue requirement?

A. The Base Rate jurisdictional rate base for the test period is approximately $4.2 billion. Please see PNM Table RNG-7 below for a summary of the Test Period rate base.

PNM Table RNG-7 Summary of Test Period Rate Base		
Test Period Ending September 30, 2028	Test Period	PNM Base Rates Jurisdiction
Total Net Plant	$ 5,893,837,858	$ 4,600,072,468
Total ADIT	(840,626,333)	(665,877,613)
Total Regulatory Assets & Liabilities	(88,939,504)	(44,219,576)
Total Other Rate Base Items	131,180,054	123,498,206
Total Working Capital	222,358,759	201,785,815
Total Test Period Rate Base	**$ 5,317,810,834**	**$ 4,215,259,299**

i. Net Plant-in-Service

Q. Please describe how the Net Plant-In-Service was developed for the Test Period.

A. The Net Plant-In-Service balance included in the Test Period is based on a thirteen-month average of the Net Plant-In-Service balances. Beginning with the Adjusted Based Period Net Plant-In-Service balances as of June 30, 2026, PNM added the monthly projected plant clearings, retirements, and accumulated depreciation from July 2026 through September 30, 2028. PNM calculates a thirteen-month average of the monthly Net Plant-In-Service balances, from September 2027 through September 2028 to develop the rate base amount included in the Test Period. Please refer to Section V, Capital Budget, for further discussion of the development of the capital budget for such investments.

Q. Please describe the workpapers that are used to develop Net Plant-in-Service balances for the Test Period.

A. PNM Exhibit RNG-4 contains two workbooks that make up the WP Plant – Net Plant Workpaper. PNM Exhibit RNG-4, WP Plant – Net Plant Workpaper contains the inputs into PNM Exhibit RNG-3, as well as the forecasted data for PNM capital projects. PNM Exhibit RNG-4, WP Plant – Corporate Net Plant Workpaper contains forecasted data for Share Services capital projects. The tabs included in PNM Exhibit RNG-4, WP Plant – Corporate Net Plant Workpaper are sequential to PNM Exhibit RNG-4, WP Plant – Net Plant Workpaper and the two are referred to as a single workpaper within my testimony.

Q. Please explain in more detail how the estimated Net Plant-In-Service balances used in the Test Period were determined.

A. Projected monthly plant clearings for generation, transmission, distribution, G&I, and projected plant retirements using the linkage data and the Test Period data were added to the gross plant balances at the end of the Adjusted Base Period to derive the monthly gross plant-in-service balances. See PNM Exhibit RNG-4, WP Plant-2, and WP Plant-3 for PNM, and PNM Exhibit RNG-4, WP Plant-10, and WP Plant 11 for Shared Services. Please refer to PNM witnesses Gray, Flores-Olivas, Sanchez and Phelps for detailed discussion of the projected capital investment clearings included in the linkage data and Test Period revenue requirements.

The accumulated depreciation balances were developed by taking the accumulated depreciation balances in the Adjusted Base Period and including calculated

monthly depreciation expense based on the forecasted plant-in-service balances as adjusted for forecasted retirements and cost of removal. See PNM Exhibit RNG-4 WP Plant-4, WP Plant-5, and WP Plant-6 for PNM and PNM Exhibit RNG-4 WP Plant-12, WP Plant-13, and WP Plant-14 for Shared Services. The monthly depreciation expense linkage for July 2026 through September 2027 was calculated using the approved depreciation rates from the 2022 Rate Case. For the Test Period, PNM used the depreciation rates proposed in this proceeding as supported by PNM witness Dane A. Watson. PNM Exhibit RNG– 4 WP Plant-1 provides a schedule of monthly Net Plant-In-Service balances from July 1, 2026, through September 30, 2028.

Q. Please summarize the capital clearings to gross plant that are included in the linkage data and Test Period.

A. The Company is requesting capital additions related to 439 projects that are expected to be cleared to plant-in-service from July 1, 2026, through September 30, 2028 ("Capital Investment Period"), totaling $1.9 billion. Please see PNM Table RNG-8 for a summary of the clearings during the Capital Investment Period and the witnesses supporting the capital investments. The clearings shown in the table below reflect clearings to gross plant-in-service (FERC account 101) as well as cost of removal clearings to accumulated depreciation (FERC account 108). The process for budgeting the capital clearings is discussed in in Section V of my testimony.

PNM Table RNG-8
Summary of Capital Clearings July 2026 through September 2028

Category	Documented Projects	Projects < $25,000	Total
Witness Gray-Distribution	$ 485,720,758	$ 60,070	$ 485,780,828
Witness Gray-Generation	467,236,468	3,379	467,239,847
Witness Gray-Transmission	8,984,592	11,764	8,996,355
Witness Sanchez	135,313,647	38,773	135,352,420
Witness Phelps	195,452,473	(5,704)	195,446,770
Witness Flores-Olivas-Distribution	215,505,824	10,647	215,516,471
Witness Flores-Olivas-Transmission	388,719,798	30,841	388,750,639
Total	**$ 1,896,933,560**	**$ 149,770**	**$ 1,897,083,330**

Q. Please identify additional adjustments made to plant activity throughout the linkage data and Test Period.

A. PNM Tables RNG-9 and RNG-10 below provide a summary of changes to net plant that are utilized in the linkage data and Test Period to build the gross plant-in-service balances. PNM Table RNG-9 summarizes the net plant activity for PNM as reflected in PNM Exhibit RNG-4, WP Plant – Net Plant Workpaper. PNM Table RNG-10 summarizes net plant activity for Shared Services as reflected in PNM Exhibit RNG-4, WP Plant – Corporate Net Plant Workpaper. These include the capital additions and accumulated depreciation, which I discussed above, and additional items that impact net plant-in-service, including estimated interim retirement of assets.

PNM Table RNG-9
PNM Linkage and Test Period Net Plant Activity

	Gross Plant	Accumulated Depreciation	Net Plant
Capital Clearings	$ 1,651,920,584	$ -	$ 1,651,920,584
Accumulated Depreciation	-	(586,125,357)	(586,125,357)
Cost of Removal Clearings	-	81,941,039	81,941,039
Interim Retirements	(115,385,981)	70,833,001	(44,552,980)
Total Activity	**$ 1,536,534,603**	**$ (433,351,317)**	**$ 1,103,183,286**

PNM Table RNG-10
Shared Services Linkage and Test Period Net Plant Activity
(Unallocated)

	Gross Plant	Accumulated Depreciation	Net Plant
Capital Clearings	$ 143,456,851	$ -	$ 143,456,851
Accumulated Depreciation	-	(97,984,537)	(97,984,537)
Cost of Removal Clearings	-	371,153	371,153
Interim Retirements	(21,849,945)	21,849,945	-
Total Activity	**$ 121,606,906**	**$ (75,763,439)**	**$ 45,843,467**

Q. How has the Company included an estimate of interim plant retirements?

A. Included in the determination of the gross plant-in-service balance are adjustments to reflect the interim retirement of assets during the linkage data and Test Period. These adjustments are necessary to ensure that depreciation expense is not overstated, as depreciation rates are applied to gross plant-in-service balances. These adjustments do not impact the net plant-in-service balance, as plant retirements serve to reduce gross plant-in-service, with an equal offset to accumulated reserve balances. Please refer to Section V, Capital Budget, for further discussion of the development of retirements to net plant-in-service and PNM Exhibit RNG-9.

Q. How has the Company accounted for cost of removal dollars included in the capital additions during the linkage data and Test Period?

A. As discussed in more detail in Section V of my testimony and PNM Exhibit RNG-10, PNM allocated a portion of plant-in-service capital additions to the cost of removal of existing assets. This treatment better aligns capital additions with historical accounting for actual additions and results in a more accurate calculation of depreciation expense.

ii. Regulatory Assets and Liabilities

Q. Have you prepared an exhibit that summarizes the regulatory assets and liabilities included in the Test Period revenue requirements?

A. Yes. PNM Exhibit RNG–4 WP RA-1 provides a summary of all regulatory assets and liabilities in the Test Period. The regulatory assets and liabilities include assets and liabilities that have been approved in prior Commission proceedings. See the sections of my testimony entitled "Other Rate Base Items" and "Other Allowable Expenses" for discussions of the regulatory assets and liabilities requested in this proceeding. Additionally, a summary of the requested approval related to regulatory assets and liabilities is provided in Section VII of my testimony.

Q. How did PNM project the Test Period balances associated with regulatory assets and liabilities that have been previously approved and are already being recovered in rates?

A. For regulatory assets and liabilities that have been previously approved or included in PNM's prior rate cases, PNM projected the balances based on the existing amortization schedules for these assets and liabilities.

Q. Please identify regulatory assets and liabilities that have been previously approved by the Commission, but are being updated or reflected in rates for the first time in this proceeding.

A. Please refer to PNM Table RNG-11 below for the regulatory assets and liabilities PNM is including in the Test Period revenue requirement that have been previously approved by the Commission and the associated proceeding or NMPRC rule that established the authority of recovery.

PNM Table RNG-11
Summary of Regulatory Assets and Liabilities Previously Approved by the Commission

Regulatory Asset/Liability	Included in Rate Base	Test Period Amortization	Amortization Period (Years)	NMPRC Case No. Establishing Regulatory Asset/Liability*
2024 Rate Case Expenses - Regulatory Asset	Yes	$ 403,470	5	24-00089-UT
SJGS Final ETA Mine Reclamation - Regulatory Asset	No	$ 1,123,052	23.8	19-00018-UT
Time of Day (TOD) - Regulatory Asset	Yes	$ 617,951	5	22-00270-UT
Community Solar Startup Cost - Regulatory Asset	Yes	$ 387,820	5	23-00071-UT
Community Solar Bill Credits - Regulatory Asset	Yes	$ 232,132	5	23-00071-UT
Energy Efficiency M&V Cost - Regulatory Asset	Yes	$ 101,615	5	NMPRC rule NMAC 17.7.2.13 (G)
2026 IRP Cost - Regulatory Asset	Yes	$ 35,814	5	NMPRC rule NMAC 17.7.3
EDAM Integration Costs - Regulatory Asset	Yes	$ 619,670	5	25-00059-UT
Rate Credit - SJGS - Regulatory Liability	Yes	$ (93,720)	1	22-00270-UT
Rate Credit - PVNGS - Regulatory Asset	Yes	$ 19,968	1	22-00270-UT
ESA Deferral Regulatory Asset and Liability - Regulatory Asset	Yes	$ 1,533,186	20	24-00089-UT
ITC - Sandia BESS - Regulatory Liability	Yes	$ (5,580,515)	5	24-00089-UT
Legacy Meter Retirements - Regulatory Asset	No	$ 1,310,513	10	22-00058-UT
Legacy Meter in Rates - Regulatory Liability	No	$ (237,624)	2	22-00058-UT

Q. What change is PNM proposing to the SJGS Final ETA Mine Reclamation Regulatory Asset?

A. In the 2024 Rate Case, a regulatory asset was approved for the San Juan Mine Reclamation liability in excess of the amount financed by the ETA bonds for a total regulatory asset of $17.0 million. As discussed by PNM witness Gray, PNM and the other San Juan owners are financially responsible for coal mine reclamation of the mines that supplied coal to San Juan. The updated coal mine reclamation studies described by PNM witness Gray demonstrate a net increase to the total cost for underground mine reclamation of $6.2 million. PNM is requesting an update to the San Juan coal mine reclamation regulatory asset for a total of $26.8 million as a result of the study as well as increases due to accretion and ash inflation, offset by trust earnings.

Q. What regulatory asset and liabilities were established as a result of the final order in the Grid Mod case?

A. Consistent with the final order in Case No. 22-00058-UT, a regulatory asset has been established to account for the undepreciated investment in legacy meters that have been retired. Additionally, a regulatory liability has been established for legacy meters retired prior to the Test Period that are currently earning a return on in base rates. I discuss Grid Mod regulatory asset and liability in more detail later in my testimony.

Q. What regulatory asset was established as a result of the EDAM case?

A. Consistent with the Final Order in Case No. 25-00059-UT, PNM has established a regulatory asset for integration costs incurred as a result of joining EDAM. I discuss the impacts of joining EDAM in more detail later in my testimony.

Q. Please describe the Rate Credit regulatory asset and liability.

A. As a result of the Final Order in PNM's 2022 Rate Case, Rider 55 was established for a San Juan Generating Station ("SJGS") credit, which was set up to credit customers over twelve months. Additionally, Rider 59 was established for a Palo Verde credit, which was set up to credit customers over twenty-four months. At the time the rider periods were complete, the balances in those accounts were too small to true-up through customer rates. Therefore, PNM is including them in this rate case in order to ensure that customers receive the full credit approved by the Commission. PNM is requesting a one-year amortization period to ensure timely credit back to customers.

iii. Other Rate Base Items

Q. Please identify the other rate base items in the Test Period revenue requirements.

A. Please refer to PNM Exhibit RNG-4 WP ORB-1 for a summary of other items in the Test Period revenue requirement.

Q. Please discuss the customer deposits and injuries and damages balances included in the Test Period revenue requirements.

A. PNM utilized the Adjusted Base Period for the Test Period balances as PNM does not expect material changes in these balances during the linkage data and Test Period.

Q. Please discuss the treatment of ARO balances in the Test Period revenue requirements.

A. PNM has included the estimated ARO liability balances, based on current accretion expense estimates. As discussed earlier, PNM has excluded the ARO liabilities associated with Palo Verde and San Juan.

Q. Please discuss the treatment of the Non-Qualified Retirement Plan ("NQRP") in the Test Period revenue requirements.

A. PNM has included a reduction in rate base associated with the NQRP. The inclusion of the NQRP balance in rate base was approved in the final order in PNM's 2007 Rate Case, similar to treatment of the Prepaid Pension Asset, and has been continued in PNM's subsequent rate cases, including the 2015 Rate Case, 2016 Rate Case, 2022 Rate Case and 2024 Rate Case. Please refer to the testimony of PNM witness Brian Arnell for further discussion of the NQRP and PNM Exhibit BA-3 for discussion of key assumptions, including contributions and anticipated

expenses that impact the NQRP estimated balance. See PNM Exhibit RNG-4 WP ORB-6 for the total inclusion on NQRP in the Test Period revenue requirement.

Q. Please discuss the treatment of the prepaid pension asset in the Test Period revenue requirements.

A. PNM calculated the balance of the Prepaid Pension Asset associated with the electric share of the defined benefit pension plan (i.e., excluding the portion allocated to the retained former gas employee obligation). PNM has included this item in rate base to the extent that customers receive a net benefit as a result of these transactions consistent with past rate cases approved by the Commission. See PNM Exhibit RNG-4 WP ORB-8, WP ORB-9 and WP ORB-10. Please refer to the testimony of PNM witness Arnell for further discussion of the prepaid pension asset and PNM Exhibit BA-3 for the estimated pension expense and contributions, which impact the Prepaid Pension Asset balance.

Q. Please discuss the treatment of the unamortized loss on reacquired debt in the Test Period revenue requirements.

A. PNM has determined the Test Period balances, reflecting current amortization activity from the linkage data and the Test Period. PNM has included these items in rate base to the extent that customers receive a net benefit as a result of these transactions. See PNM Exhibit RNG-4 WP RA-2.

Q. Please discuss the treatment of possessory interest tax in the Test Period revenue requirements.

A. PNM has estimated the balance of possessory interest tax payments made to tribal entities. As this estimation reflects periodic prepayments, PNM has used the 13-month average from the Base Period to determine the amount to include in the Test Period. PNM allocated this amount to the Retail category based on net plant balances as that is the basis for possessory interest tax.

Q. Please discuss the treatment of the Pathnet liability in the Test Period revenue requirements.

A. PNM has estimated the balance of the Pathnet liability based on the amortization of the liability. PNM received payment for use of certain fiber optic lines, which reflects the liability included in rate base.

Q. Please discuss the treatment of the Tucson Electric Power Company ROW liability in the Test Period revenue requirements.

A. PNM has estimated the balance of the Tucson Electric Power Company liability based on the existing amortization period. Tucson Electric Power Company paid PNM their share of a ROW liability, and PNM is amortizing this liability over the term of agreement. This is consistent with the treatment in the 2022 Rate Case.[10]

[10] *See, e.g.*, Case No. 22-00270-UT, Direct Testimony of Kyle T. Sanders, at 55:1-6.

Q. Please discuss the treatment of costs for ROWs in the Test Period revenue requirements.

A. PNM determined monthly ROW balances, beginning with actual balances as of June 30, 2026, less monthly amortization from July 2026 through September 2028, plus any ROW renewals projected during the linkage data and the Test Period. PNM included amortization of the ROW costs, including existing and renewals, from July 2026 through September 2028, as a reduction to the balances included in rate base. ROW amortization expense is included in operating expenses. Please refer to PNM witness Flores-Olivas for a discussion of ROW renewals included in the linkage data and Test Period. See PNM Exhibit RNG–4 WP OM-15 and WP OM-16.

Q. Please explain the overall recoverability of rate docket expenses.

A. Utilities that are subject to cost of service regulation must make rate filings and obtain public utility commission authorization to establish new rates. There is a cost associated with making necessary rate filings. The longstanding practice of this Commission has been to treat reasonable rate docket expenses as a necessary cost of doing business and, after review, has approved PNM's recovery of rate docket expenses through amortizations approved in rate docket proceedings.

Q. What amount is PNM seeking to recover in rate docket expenses for the current case?

A. PNM is seeking recovery of $4.1 million in rate case expenses, as detailed in PNM Exhibit RNG-4 WP ORB-12. Rate case expenses include the out-of-pocket costs incurred by PNM for providing notice to customers and postage, as well as costs for outside consultants, accounting firms, and attorneys in preparing and litigating the case. PNM's engagement of outside services for this case is a cost-effective means to meet the requirements of a complex rate case filing. PNM hires outside service firms to prepare and support its filing versus hiring full-time staff to provide these same services, as these services are cyclical in nature. PNM is requesting to establish a regulatory asset to recover these costs over a five-year period.

Q. What is the basis for PNM using a five-year amortization period for these rate docket expenses?

A. The five-year amortization period is consistent with the recovery period authorized by the Commission for similar costs in the 2022 and 2024 Rate Cases.[11]

Q. Please list and generally describe PNM's major rate case expense categories.

A. The major categories of rate docket expenses, and list of outside consultants, are reflected in PNM Exhibit RNG-4, WP ORB-12, and include the following areas:

[11] Case No. 24-00089-UT, *Certification of Stipulation*, at 33-34 (accepted, approved and adopted in relevant part by *Final Order*) Case No. 22-00270-UT, *Recommended Decision*, at 323 (accepted, approved and adopted in relevant part by *Final Order*).

Consultants: Consultants are necessary for the preparation of a comprehensive electric rate docket for several reasons. Consultants often provide services to support a proposed return on equity ("ROE"), undertake specific studies or analyses (including lead-lag and depreciation studies), review and develop testimony, respond to discovery, testify as a witness, or provide assistance in assembling a general rate case. Typically, the expertise sought from the consultant is not expertise that is hired on a permanent basis within PNM.

Outside Legal Counsel: In staffing the legal department the Company does not assume that there will be annual rate cases, and sufficient levels of staffing and expertise to file and litigate a comprehensive rate docket is not always available through in-house counsel for all topics; thus, outside legal assistance is appropriate. Outside legal assistance in developing, processing, and litigating a rate docket is a valid rate docket expense. PNM Exhibit RNG-8 discusses the reasonableness of PNM's legal costs.

Other Costs: The "Other Costs" category covers mailing, postage, reproduction, and similar costs. Pursuant to 17.1.2.10(C)(2) NMAC, the Company must provide notice to its customers when filing the rate request. This means sending out mailings to customers at a substantial printing and mailing cost. This also requires publications in a major newspaper to properly notify all customers affected by the rate docket proceeding.

Please see PNM Exhibit RNG-11 for a more detailed description of the costs reflected in rate docket expenses.

iv. Working Capital

Q. What are the components of PNM's working capital?

A. Working Capital consists of nuclear fuel stock, production fuel stock, materials and supplies, and prepayments.

Q. Please describe how the Test Period balances were developed for nuclear fuel stock.

A. The nuclear fuel stock balances are based on projected nuclear fuel amortization at Palo Verde, plus any new nuclear fuel capital acquisitions. PNM receives this information from Arizona Public Service Company, the operator or Palo Verde. Please refer to the testimony of PNM witness Gray for discussion of projected nuclear fuel capital acquisitions. The amortization of the nuclear fuel is included in the estimate of nuclear fuel expense. See Rule 530 Schedule B-7, as filed in PNM Exhibit RNG-4 WP WC.

Q. Please describe the development of the Test Period balances for production fuel stock and materials and supplies.

A. PNM utilized the thirteen-month average balances for production fuel stock, materials and supplies, and prepayments (except for the transmission prepayment I

discuss below) included in the Adjusted Base Period as the balances in the Test Period revenue requirements. PNM does not anticipate any significant changes in these balances. The Adjusted Base Period is a reasonable representation of balances expected during the Test Period. See Rule 530 Schedule E-2, as filed in PNM Exhibit RNG-4 WP WC.

Q. How did PNM determine the transmission ROW prepayment included in the Test Period revenue requirements?

A. PNM makes an annual ROW payment to the Navajo Nation in April of each year for the following year. PNM estimated the expected annual payment to be made in April 2027, and April 2028 when it developed the prepayment balance included in the linkage data and through the Test Period. Please see PNM Exhibit RNG-4 OM-14.

Q. What amount of cash working capital has PNM included in rate base for the Test Period?

A. PNM included a cash working capital amount of approximately $3.8 million in the Test Period revenue requirements. The cash working capital allowance is based on the lead-lag study performed by PricewaterhouseCoopers, LLP. The calculation of the cash working capital amount is included in Rule 530 Schedule E-1.

B. Fuel expense

Q. Please describe the process used to develop the fuel forecast for the linkage data and Test Period.

A. PNM utilizes the program AURORA® to forecast fuel, purchased power energy, and off-system sales. The output from AURORA is combined with additional data described below to develop the fuel forecast. Please refer to PNM Exhibit RNG-12 for listing of key inputs and assumptions utilized to develop the Test Period fuel forecast. The use of a program such as AURORA is a reasonable means of forecasting fuel costs.

Q. What is the purpose of using a simulation program such as AURORA?

A. Due to changes that can occur from year-to-year that could impact fuel costs (e.g., planned outages, forced outages, fuel prices, changes in generation mix, load and market prices etc.), the best way to estimate future fuel costs is to define the assumptions that drive future costs and simulate the dispatch of the generating system under those conditions. AURORA simulates the actual hourly dispatch used to operate the real-time system to meet the total system load including losses and reserve requirements. System load data, market pricing data, system constraints, and plant and transaction characteristics are inputs to the model. For each hour, the model evaluates the resources that are on-line, the resources that are available to dispatch and the market price of purchases; the model then selects the most economic option to serve the load each hour. If in any hour the model determines

there will be economic power available in excess of what will be needed to serve load and associated losses, the model will generate an estimate of market sales for that hour. In addition, AURORA uses a "pipeline" model to account for the impact of transmission constraints on the economic outcome.

Q. How did you estimate the fuel costs for the Test Period?

A. The Test Period fuel cost reflects the expected fuel costs, market prices, load and generation portfolio for the period October 1, 2027, through September 30, 2028.

Q. What new resources are included in the Test Period?

A. In Case No. 24-00271-UT, PNM requested approval for new purchased power agreements ("PPA"), ESAs and an owned Battery Storage project. Additionally, in Case No. 25-00055-UT, PNM requested a certificate of public convenience and necessity ("CCN") for the Distribution Phase 2 BESS project.

PNM has included the energy output and associated energy costs of these agreements in the AURORA simulation to determine the Test Period revenue requirement. For the Valencia PPA, demand charges are recovered through base rates, while energy charges are passed through the FPPCAC. PNM has included the demand charges associated with new ESAs to be recovered through base rates. PNM owned resources, such as Sunbelt Solar, Sunbelt BESS and Distribution

Phase 2 BESS are included as resources in PNM's fuel runs, however, the cost associated with these are included non-fuel base rates.

Q. What are the total ESA costs PNM has included in the Test Period?

A. Please see PNM Table RNG-12 below for a list of ESA projects and their associated cost included in the Test Period. PNM has ESAs for resources that are paid directly by the Rate 36B customer and are not included in the Test Period for inclusion in non-fuel base rates. These ESAs are excluded from the Test Period and the table below. Refer to the direct testimony of PNM witness Gray for a complete list of PNM's ESAs.

PNM Table RNG - 12	
ESA Project	**Test Period**
Arroyo	15,157,814
Jicarilla 1	2,551,323
San Juan Solar	13,021,633
Atrisco	35,666,669
Quail Ranch	16,061,951
Route 66	7,797,730
Sky Ranch II	16,352,922
Sun Lasso	14,405,005
Corrazon	16,129,590
Total	**$ 137,144,634**

Q. What is the PNM retail Test Period fuel cost based on the AURORA simulation?

A. The PNM Retail Test Period fuel cost based on the AURORA simulation is approximately $134.1 million, including the offset of $25.6 million of EDAM revenue that PNM is requesting to be returned to customers through its FPPCAC. I discuss this treatment of EDAM revenue in more detail later in my testimony. PNM Exhibit RNG-4 WP Fuel-3: Test COS provides a summary of the results and the calculation of the fuel cost.

Q. Are there any fuel-related O&M costs included in the non-fuel revenue requirements that are not included in the calculation of fuel recovered under PNM's FPPCAC?

A. Yes. The fuel-related expenses that are not subject to the FPPCAC are associated with fixed gas transportation costs, demand costs associated with the Valencia PPA, ESA costs and broker fees. PNM recovers these costs in base rates.

Q. How did PNM determine the fixed gas transportation costs?

A. Gas transportation costs are projected based on current contracts for delivery of gas to PNM gas-fired generation plants. The contract for delivery of gas to the northern gas plants is estimated to be $13.5 million in the Test Period.

Q. How did PNM determine the demand costs associated with the Valencia PPA?

A. Valencia demand charges are based on contract rates and capacity. The prices are indexed to the U.S. Consumer Price Index and the State Area Employment Index

for Albuquerque and are based on the current forecast. The capacity payment escalates at 1% per year and includes a heat rate adjustment payment. For the Test Period, no heat rate adjustment payment has been forecasted. Additionally, the Valencia PPA requires PNM to pay the property tax on that facility; those costs are based on the Base Period cost and are included in the Valencia demand charges.

Q. Is PNM proposing any changes to the components included in the FPPCAC in this case?

A. Yes. As discussed in more detail later in my testimony, PNM is proposing to include EDAM revenues in the FPPCAC. These revenues correlate to transmission revenues that have previously been recovered as a revenue credit in base rates.

C. O&M Expense

Q. Please describe the adjustments made to O&M expenses in the Test Period revenue requirement.

A. The starting point for the Test Period O&M was the Adjusted Base Period O&M. Except for the specific items discussed below, non-labor O&M expenses in the Adjusted Base Period were escalated using a 3.0% escalation for 2027 and then 2027 expense was escalated using a 3.0% escalation to project Test Period O&M expense. I discuss the rationale for the 3.0% non-labor escalation rate below. PNM Exhibit RNG-4 WP OM-2, Column H and Column I provides the calculation of the portion of Test Period non-labor O&M that is based on a 3.0% escalation factors.

PNM Exhibit RNG-4 WP OM-4 provides a summary of the specific O&M items that were individually projected to develop the Test Period. In addition, PNM Exhibit RNG-4 WP OM-2 provides a reconciliation of O&M expense from the Base Period, through the Adjusted Base Period and into the Test Period revenue requirements.

Q. Why is the 3% annual escalation for non-labor O&M expenses reasonable in this case?

A. PNM selected the 3.0% non-labor annual escalator because it captures the impacts of inflation in the current market. Based on the Consumer Price Index ("CPI") escalations, 2026 is already experiencing a 3.5% year-over-year increase as of June 2026 and 3.3% over the average 2025 index. Given the current inflationary market, PNM expects higher inflation costs to continue, and as a result, higher costs to provide the same level of service. Please see PNM Table RNG-13 for historical CPI increases.

PNM Table RNG-13 Inflation, Average Consumer Prices (Indexed to Year 1984) for United States		
Year*	CPI Value	% Growth
2020	258.9	
2021	271.0	4.7%
2022	292.6	8.0%
2023	304.7	4.1%
2024	313.7	3.0%
2025	322.0	2.6%
2026	332.6	3.3%
Source: U.S. Bureau of Labor Statistics		
All items in U.S. city average, all urban consumers, Seasonally adjusted		
https://www.bls.gov/data/		
*Based on year average index; except 2026, which is based on June year-to-date index		

Q. Please summarize the O&M expenses included in the Test Period revenue requirements that are specifically forecasted.

A. PNM Exhibit RNG–4 WP OM-4 provides the detail of the adjustments to O&M that have been specifically identified and estimated based on individual factors other than labor and non-labor escalation rates (discussed above and below). Please see PNM Table RNG-14 below for a summary of the specifically forecasted categories for the Test Period.

PNM Table RNG-14
Summary of Specifically Forecasted Expenses and Corresponding Witness

Specifically Forecasted Expense	Workpaper Reference	PNM Witness
Excess Liability Insurance Premiums	WP SS-3, Column P WP OM-4, Column S	Agrawal
Incremental Asset Hardening	WP OM-4, Column AA WP LA-2, Column Z	Gray/Flores-Olivas
Incremental Low Income Rate O&M	WP OM-4, Column AB WP LA-2, Column Z	Babej
Incremental BTS and General Services O&M	WP SS-3, Column Q WP LA-5, Column Z	Phelps
Active Medical and Dental	WP OM-4, Column P WP SS-3, Column O	Pino
Incentive Compensation	WP SS-3, Column N	Pino
Incremental Grid Expansion and Renewable Energy Investments	WP OM-4, Column AC WP LA-2, Column Z WP LA-5 Column Z	Gray/Flores-Olivas
Incremental Wildfire Mitigation O&M	WP OM-4, Column AD	Gray
Right of Way (ROW) Expenses	WP OM-4, Column T	Flores-Olivas
Grid Modernization O&M	WP OM-4 Column Z	Gray
A&G Capital Loads	WP OM-4, Column X	Gutierrez
Retiree Medical and Pension	WP OM-4, Columns O & Q	Arnell

Q. Please summarize the O&M expense categories included in the Test Period revenue requirement that are determined based on established amortization schedules or other fixed terms.

A. Included within the detail of PNM Exhibit RNG–4 WP OM-4 are those based on established amortization schedules as follows:

- ROW Amortizations – Amortizations of existing ROW balances have been included in the Test Period revenue requirements based on existing amortization schedules, which typically follow the expected term of the

underlying ROW agreement. In addition, PNM included in the ROW amortization the ROW renewals expected to occur between July 2026 and September 2028, and included the projected amortization of these ROW renewals in the Test Period. Refer to PNM witness Flores-Olivas for a discussion of ROW renewals in the linkage data and Test Period. See PNM Exhibit RNG–4 WP OM-14, WP OM-15, and WP OM-16.

- Palo Verde Combustion and Engineering, Prudency Audit and FERC portion of Excess Gain Amortizations – PNM reflected the expected credits included in the Test Period based on existing amortization schedules of these balances. Please see PNM Exhibit RNG-4 WP OM-13.
- 2022 and 2024 Rate Case expense amortization – The amortization of rate case expenses from PNM's recently approved rate case (Case No. 22-00270-UT) are reflected in the costs recorded to FERC account 928 and are based on the amortization schedule from the 2022 and 2024 Rate Cases, respectively.

Q. Please describe the adjustments made to labor expenses from the Adjusted Base Period to the Test Period revenue requirements.

A. Base labor and overtime expense was escalated from the Adjusted Base Period using a 4.0% annual labor escalator for non-union employees effective April of 2027 and 2028. PNM applied a 5.0% labor escalator in 2027 and 2028 effective May of each year for union employees. Please refer to the testimony of PNM witness Pino for further discussion of these labor escalation rates and adjustments. See PNM Exhibit RNG-4 WP LA-1 and WP LA-4.

Q. Has the Company reflected changes to full time equivalent ("FTE") labor expenses based on expected hiring during the linkage data and Test Period?

A. Yes. As discussed by PNM witnesses Gray, Flores-Olivas, Phelps and Babej, the Company has added FTE labor expenses to reflect expected changes in workforce. Please see PNM Exhibit RNG-4 WP LA-2 and LA-5 for labor expenses.

Q. Has the Company included incentive compensation for wholesale power marketing in the Test Period?

A. Yes. As discussed by PNM witness Pino, the Company includes the expected payout for wholesale power marketing incentives in the Test Period. The amount in the Test Period reflects the Base Period amount which represents the accrual of 6 months of the 2025 plan pay out and 6 months of the expected 2026 plan pay out, then escalated by the labor escalations (discussed earlier), to reflect the changes in the underlying salaries.

Q. Please describe the adjustments made to pensions and retiree medical expenses from the Adjusted Base Period to the Test Period revenue requirements.

A. PNM determined retiree pension expenses in the Test Period based on information provided by PNM's actuary, WTW (formerly Willis Towers Watson). The Test Period retiree pension expense is based on updated assumptions provided by the actuaries. The retiree medical expense is included at zero-dollar cost, consistent

with the treatment in the Final Orders of the 2022 Rate Case and 2024 Rate Case. See PNM Exhibit RNG-4 WP OM-5 for the detail of these expenses. Consistent with the similar adjustment for the Base Period, PNM removed the portion of retiree pension expense associated with former gas business employees covered under the retiree pension plan in the Test Period revenue requirements. Please refer to the testimony of PNM witness Arnell for additional detail regarding the adjustments to pension and retiree medical expense.

Q. How did PNM determine the capital loads for the Test Period revenue requirements?

A. The amount of capital loads included in the Test Period revenue requirement is based on the projected capital spend that is included in the Test Period. The resulting capital loads are included as a reduction to O&M expense, reflected in the A&G expense accounts. I discuss the Test Period capital loads in more detail later in my testimony. See PNM Exhibit RNG-4 WP OM-4, Column K and Column X for the A&G loads. The impacts to the Injuries and Damages ("I&D") and Pension and Benefits ("P&B") capital loads are included in the impacts shown in PNM Exhibit RNG-4 WP LA-2 and LA-5.

Q. How did PNM develop the active medical and dental expense for the Test Period revenue requirement?

A. As discussed and supported by PNM witness Pino, PNM applied an 8% escalation rate to the Adjusted Base Period expenses for active medical and dental expenses for 2027 and 2028 to develop the Test Period revenue requirements. See PNM Exhibit RNG-4 WP OM-6.

Q. Does PNM normalize the planned outage expenses included in the Test Period revenue requirements?

A. Yes. As discussed in more detail by PNM witness Gray, planned outage expenses occur at various times depending on the type of generating plant and the operational and maintenance needs of the plant. PNM typically expends large amounts of O&M and capital dollars during planned outages. Given the variability in the occurrence of planned outages, the amount of O&M expense related to planned outages can vary significantly from year to year. Consequently, PNM normalized the amount of planned outage expenses included in its Test Period revenue requirements. Including a normalized level of planned outage expense is a reasonable approach in setting rates that has been authorized by the Commission in prior rate cases.[12] If outages are not normalized, the result would be to embed in rates the volatility associated with the timing of outages.

[12] *See* Case No. 22-00270-UT, *Recommended Decision*, at 293-295 (adopted in relevant part by *Final Order*); *see also* Case No. 15-00261-UT, *Corrected Recommended Decision*, at 27 (adopted in relevant part by *Final Order Partially Adopting Corrected Recommended Decision*).

Q. How did PNM calculate the planned outage expense for the Test Period revenue requirements?

A. First, PNM removed outage expenses associated with the Four Corners and Palo Verde leased capacity from the Base Period. PNM then escalated the historical outage costs for each remaining generating unit for the six years prior to the Base Period, using a 1.5% annual non-labor escalation rate, to derive the planned outage expense for each unit in Base Period dollars. PNM then calculated the average planned outage expenses over a six-year period at each generating unit to develop the Adjusted Base Period planned outage expense. PNM then escalated the Adjusted Base Period planned outage expenses by the annual 3.0% escalation rate for two periods to determine planned outage expense in the Test Period.

Q. Has PNM forecasted its litigation expenses for the Test Period?

A. Yes. Forecasted litigation expenses for the Test Period are approximately $1.9 million. These litigation expenses are primarily legal fees associated with outside counsel and their staff, and expenses associated with in-house lawyers and paralegals incurred in connection with litigation as defined in 17.9.530.7(P) NMAC. Also included are matter expenses, such as expert witness fees, court reporter expenses, court fees, and reproduction costs.

In order to forecast litigation expenses, PNM examines the legal expenses incurred in the Base Period that fall within the "litigation" definition in Rule 530.7(P), and

thus, are eligible to form the basis of developing Test Period litigation expenses. PNM Exhibit RNG-8 summarizes the Base Period litigation expenses that form the basis of the Test Period projections. This exhibit also compares the litigation expenses incurred in the Base Period to litigation expenses included in PNM's four prior rate cases (2015 Rate Case, 2016 Rate Case, 2022 Rate Case and 2024 Rate Case).

Q. Are the forecasted Test Period litigation expenses reasonable?

A. Yes. As noted above, PNM Exhibit RNG-8 compares the litigation expenses that PNM incurred in the Base Period to prior year's litigation expenses.[13] Litigation expenses have not materially changed since the four prior rate cases. To forecast Test Period litigation expenses, PNM applied the non-labor and labor factors as describe above to these Base Period expense. This approach, which is used for a number of other expenses, is reasonable and results in prudent litigation expenses in the Test Period.

Q. Please describe the specific O&M programs as supported by other PNM witnesses.

A. PNM is requesting separately forecasted O&M for specific programs as described by other witnesses. These O&M amounts included both labor and non-labor cost

[13] As noted above, Exhibit RNG-4 WP OM-3, Column K removes Base Period expenses that do not meet definition of "litigation expenses" in 17.9.530.7(P) NMAC. As an example, PNM has not included in the Base Period litigation expenses deferred to other periods for accounting purposes and litigation expenses separately included in regulatory assets.

elements. PNM witnesses Gray and Flores-Olivas discuss O&M requests related to PNM's transmission and distribution operations, including wildfire mitigation. PNM witness Babej discusses O&M requests related to PNM's proposed low-income rate implementation.

Q. Please summarize the O&M expenses included in the Test Period revenue requirements that are allocated from Shared Services.

A. The starting point for the Test Period O&M was the Adjusted Base Period O&M. Except for the items that are specifically forecasted in the Test Period, non-labor O&M expenses in the Adjusted Base Period were escalated at the rate of 3.0% for 2027 and 3.0% for 2028 to project the Test Period O&M expense. PNM Exhibit RNG–4 WP SS-3 provides a summary of the adjustments to O&M that have been specifically identified and forecasted based on individual factors. Specifically, these include labor (including overtime expense), incentive compensation, insurance premiums, active medical and dental expense and specific O&M requests supported by other witnesses. Except for incentive compensation, the adjustments made for Shared Services are the same as those discussed above for these types of expenses when incurred directly by PNM.

Q. What other incentive compensation has PNM included in the Test Period revenue requirements?

A. As discussed by PNM witness Pino, PNM is seeking inclusion for incentive compensation related to the Business Unit Group Incentive Program. PNM Exhibit

RNG-4 WP SS-10 provides the detail of incentive compensation amounts included in the Test Period revenue requirements.

Q. How were shared services O&M expenses allocated to PNM in the Test Period revenue requirements?

A. PNM used the 2027 CAM allocation rates to allocate O&M expenses from Shared Services to PNM for the Test Period. See PNM Exhibit RNG-4 WP SS-6 for 2027 CAM allocation rates. All adjustments referenced in my testimony related to Shared Services reflect total amounts, a portion of which are allocated to PNM. Please refer to PNM Exhibit RNG-4 WP SS-1 for allocation of costs to PNM. As discussed earlier, PNM updates the allocation percentages in the CAM on an annual basis so that allocation rates remain current for accounting purposes. PNM will not develop the 2028 CAM until the end of 2027; however, PNM is not aware of any significant potential changes to the CAM from the amounts developed for the 2027 CAM.

Q. Please describe the specific O&M programs at Shared Services as supported by other PNM witnesses.

A. PNM witness Phelps discusses O&M requests related to cyber security, application integration and operational reliability.

D. Depreciation and amortization expense

Q. What depreciation rates has PNM used to estimate depreciation expense in the linkage data?

A. PNM has utilized the depreciation rates that were recently approved in the 2022 Rate Case to develop the linkage data depreciation and amortization expense.

Q. Is PNM proposing any changes to the currently approved depreciation rates for the Test Period?

A. Yes. PNM has proposed new depreciation rates as supported by the Depreciation Study in PNM witness Watson's testimony.

Q. How does the Depreciation Study impact revenue requirements?

A. PNM Exhibit RNG-4 WP Plant-1b shows the impact of the requested change in depreciation rates. The depreciation expense was applied to gross plant balances beginning October 1, 2027, to reflect a full year of new depreciation rates in the Test Period. PNM has reflected the new depreciation expense and also reflected the impacts of the new depreciation expense in the accumulated reserve balances in Net Plant-In-Service, which reduces rate base. The impact to PNM Retail's depreciation expense as the result of the Depreciation Study using the forecasted Test Period is an increase of $12.3 million. See PNM Exhibit RNG-4 WP Plant-1b, column Q.

Q. Was the useful life of the Reeves Generating Station ("Reeves") in the Depreciation Study reflective of the life extension proposed in the 2029-2032 Resource Filing?

A. The 2029-2032 Resource Filing in Docket 26-0000114, confirms the operational extension of Reeves to the end of 2044. The Depreciation Study reflects Reeves' useful life as the end of 2045. The discrepancy in the useful life (2045 vs. 2044) was noted late in PNM's final review of the study. This assumption results in an immaterial difference in the depreciation rate and expense that ultimately is a lower cost to customers. PNM instructed PNM witness Watson not to update the rate from 2045 to 2044 in the Depreciation Study.

Q. How is Four Corners reflected in PNM's Test Period depreciation expense?

A. Four Corners was excluded from the Depreciation Study sponsored by PNM witness Watson, and PNM is not requesting a new Four Corners depreciation rate in this proceeding. PNM applies the existing Four Corners depreciation rates to the applicable Test Period plant balances. The resulting depreciation expense and accumulated depreciation are reflected in PNM Exhibit RNG-4, WP Plant. PNM witness Gray addresses PNM's current operational expectation for Four Corners.

Q. How has PNM projected depreciation and amortization expenses for the Test Period?

A. Depreciation expense on plant additions and existing assets for the Test Period is based upon the Depreciation Study proposed in this case, as supported by PNM

witness Watson. See PNM Exhibit DAW-2. PNM has also adjusted the Test Period accumulated depreciation reserve to reflect the effect of depreciation expense accruals based on the monthly depreciation expense.

Depreciation expense for plant additions was included in the Test Period based on projected clearings to plant-in-service. For example, if a plant addition was expected to be in-service in January 2028, then the additional depreciation expense and associated accumulated depreciation reserve were determined for the period February 2028 through September 2028. This was done instead of annualizing depreciation to reflect a full year of depreciation expense on the addition, as would be the case if a historical test period were being proposed. Please see PNM Exhibit RNG–4 WP Plant-4 and WP Plant-12 for details of the calculation.

Q. Did PNM manually calculate depreciation expense for any assets in the linkage data and Test Period?

A. Yes. Assets recorded in Computer Software FERC plant accounts are depreciated based on existing amortization schedules of the underlying assets recorded in the Company's books and records. Given the volume and complexity of these amortizations, PNM has not added the functionality of these amortizations into the functional model. In addition, the depreciation expense associated with the ARC Asset associated with AROs are also manually input based on straight line

amortizations per the Company's books and records. See PNM Exhibit RNG-4 WP Plant-4.

E. General taxes

Q. Please describe how property taxes were derived in the Test Period revenue requirement.

A. Property taxes are derived in the Test Period by multiplying the taxable plant-in-service balance of the prior year balance times the expected property tax rates for the period. The property tax expense for the Test Period was estimated based on the expected taxable plant-in-service balance as of December 2027 multiplied by the estimated property tax rates weighted for 2027 and 2028. See PNM Exhibit RNG-4 WP GT-2 for calculation of property tax expense reflected in the Test Period revenue requirements and PNM Exhibit RNG-4 WP GT-3 for calculation of property tax rates for 2026, 2027 and 2028.

Q. Has PNM calculated property tax rates in the Test Period revenue requirement?

A. Yes. A composite rate for total New Mexico plant was computed based on 2025 taxes paid divided by the estimated taxable balances. These rates were then used in the Test Period calculation of property tax expense, with no escalation. The calculation of the New Mexico property tax rates is included in PNM Exhibit RNG-4 WP GT-3. For Arizona assets, such as Palo Verde, an effective tax rate was

computed based on taxes paid in the Base Period divided by December 2025 net plant balances. These Arizona tax rates were used for estimated 2026, 2027 and 2028 tax calculations, with no escalation.

Q. Please describe how payroll taxes were derived in the Test Period revenue requirements.

A. As discussed earlier, PNM normalized the labor expenses included in the Test Period revenue requirements, including incentive compensation. In addition, PNM adjusted the labor expenses to reflect expected annual merit increases for wages paid to PNM employees and expected FTE additions. Based on estimated labor dollars, PNM calculated the expected payroll tax expense to be incurred in the Test Period. The percentage applied to labor dollars to calculate the cost of social security, Medicare, and federal and state unemployment taxes for PNM Transmission and Distribution accounts, PNM Production accounts, and Shared Services accounts were: 8.26%, 8.26%, and 6.98%, respectively. These percentages are based on effective rates, taking into consideration wage-based limits on certain payroll taxes, and are calculated in the determination of capital loads. PNM has not calculated a credit to the payroll tax expense for capitalized labor in the general taxes section based on the methodology used to determine the payroll tax expense in the linkage data and Test Period. PNM only included payroll tax expense expected to be incurred for labor that is recorded to the income statement, and not for labor that is capitalized. As a result, the amount of payroll taxes included in the

Test Period revenue requirements is already reflected net of any payroll taxes that would be capitalized. See PNM Exhibit RNG-4 WP GT-4 for a summary of payroll taxes included in the Test Period.

Q. What are the other components of general taxes and how were they derived in the Test Period revenue requirements?

A. The other components of general taxes include Native American taxes, other miscellaneous taxes, and taxes paid on jointly owned facilities, including Four Corners and Palo Verde. PNM used the same non-labor escalation factor as applied to O&M of 3.0% for 2027 and then 2027 expense was escalated using a 3.0% escalation rate to project the Test Period revenue requirements. Please see PNM Exhibit RNG-4 WP GT-6.

F. Other allowable expenses

Q. Please identify the components included for recovery in other allowable expenses based on amortization schedules.

A. PNM Exhibit RNG-4 WP OA-1 details the other allowable expenses included in the development of the Test Period revenue requirements.

Q. Are there any expense items in other allowable expenses that are included in the Test Period revenue requirements that were not included in PNM's previous cases?

A. Yes, PNM has included the amortizations of regulatory assets and liabilities that have been previously approved by the Commission. Refer to PNM Table RNG-11 shown earlier in my testimony for a listing of the regulatory assets and liabilities, the total test period amortization, and the associated proceeding or NMPRC rule that established the authority of recovery. The table indicates whether each asset or liability is included in rate base. Items noted as not being included in rate base only include the associated amortization in the Test Period.

Additionally, PNM has included the amortization of the 2027 Grid Mod Regulatory Asset, discussed in greater detail later in my testimony.

G. Income Tax Calculation

Q. How has PNM calculated the income tax expenses included in the Test Period revenue requirements?

A. The income tax expense included in the Test Period revenue requirement is based on the applicable 21% federal and 5.90% state income tax rates that are expected to be effective in the Test Period. Please refer to PNM witness Morris for further discussion of the income tax expense included in the Test Period revenue requirements.

H. Revenue credits

Q. How were the amounts for the revenue credits developed for purposes of the Test Period revenue requirements?

A. PNM forecasted an increase in revenues of 3.0% for two periods consistent with the proposed escalation reflected in general O&M expenses as discussed earlier in my testimony.

Q. Were there any specifically forecasted revenue credits?

A. Yes, PNM specifically forecasted Gas pipeline capacity sales based on projections discussed and supported by PNM witness Gray. Additionally, PNM specifically forecasted Securitization Servicing and Administration Fees based on existing Energy Transition Bond agreements.

I. Other miscellaneous items

Q. How has PNM determined the generation energy and demand allocators included in the Test Period revenue requirements?

A. Rate base and operating expenses allocated based on generation energy and demand are allocated 100% to PNM Retail. The demand information for PNM Retail is based on 12 CP data. Please see PNM Exhibit RNG-4 WP AL-4 for a summary of generation demand and energy, transmission demand and sales allocators in the Test Period.

Q. How has PNM determined the transmission demand allocators included in the Test Period revenue requirements?

A. PNM started with the Base Period transmission demand allocator. PNM has included all known Long-Term PTP contracts, and expected changes from the Base Period. The support for the transmission demand allocator for the Test Period is included in PNM Exhibit RNG-4 WP AL-7.

Q. What ROE is PNM proposing to use in the determination of the Test Period revenue requirements?

A. PNM is proposing to use an ROE of 9.90% in the Test Period, as discussed by PNM witnesses McKenzie and Agrawal. See Rule 530 Schedule A-5 Test for the capital structure utilized in the determination of the Test Period revenue requirements.

Q. Has PNM adjusted the Test Period return on rate base to account for the debt only return on certain regulatory assets?

A. Yes. PNM included an adjustment to the total return on rate base to reflect the debt only return on certain regulatory assets and liabilities consistent with the final orders in the 2022 Rate Case, 2024 Rate Case and the San Juan abandonment and financing proceeding, 19-00018-UT.

V. CAPITAL BUDGET

A. Capital Budget Process

Q. Please summarize how the capital projects included in this filing were selected.

A. The selection process is comprised of three steps: 1) identification of need for a project; 2) availability of funds for investment; and 3) approvals for total annual capital spending.

Q. Please describe the first step in the capital projects selection process.

A. The need for any project is determined by the responsible business group based on identified needs. Refer to the direct testimony of PNM witnesses Gray, Flores-Olivas, Sanchez, and Phelps for additional discussion on capital project processes.

Q. How are capital projects planned and approved?

A. After the investment needs are identified by the operations teams as described by PNM witnesses Gray, Flores-Olivas, Sanchez, and Phelps, there is a formal annual capital budgeting process that starts by determining the amounts that can be funded by the business. There are typically more capital needs than there is available funding, which results in capital targets being set for the operation teams. New Mexico Operations for Transmission and Distribution ("NM OPS"), Generation, and Shared Services utilize these capital targets to determine which capital projects to select, while staying within the identified capital targets that can be funded. The

portfolios of capital projects including their estimated capital spending and clearings are loaded into PowerPlan, PNM's capital budgeting system.

Q. Please further explain how capital targets are developed and utilized in the capital budgeting process.

A. The capital planning cycle consists of four distinct, but related, planning efforts. The first is PNM's Integrated Resource Plan, which defines how the Company will address future power needs. The second component of the planning cycle is the development of a Long-Range Plan based on modeling and analysis of economic, operational, and financial scenarios, typically over a five-year planning horizon. The final two components entail business planning and budgeting. Business planning and budgeting activities are conducted on an annual basis and are the basis for PNM's AOP, which is finalized in the last quarter of each calendar year.

The AOP process provides individual business segments with five-year capital targets. These targets serve as a guide to the individual business groups to enable them to plan future capital projects more accurately, as well as to manage ongoing projects.

Q. Please explain how the capital budget is reviewed and approved for inclusion in the AOP.

A. The TXNM Resource Council (comprised of the President and Chief Executive Officer and the Senior Vice President and Chief Financial Officer) reviews the capital requests of each business group and based on discussions with the operations teams, can request adjustments to the proposed portfolio of capital spending projects. For example, the Resource Council can request changes to the prioritization of projects or to the amount of capital targets allocated to each business group over the five-year period. If necessary, each business group updates its capital request based on Resource Council feedback and finalizes the list of capital projects to be included. Finalized capital budget information for the five-year period is then input into the budget system. TXNM Board of Directors ("Board") approval is sought for the capital projects included in the AOP. During the AOP process, the Board also reviews all individual projects in excess of $25 million. Once approved by the Board, the first year of the five-year capital plan is formally included in the AOP.

Q. Please describe the capital budget documentation developed to support the capital projects addressed in this case?

A. The capital budget documentation is organized into projects that are sponsored by the respective witnesses. Information for each project includes Project Number and Name, Business Segment (referred to as Company on the documentation), Location, Estimated Start and Completion Dates, Estimated Cost Allocation Percentages by County, Description, Project Need Justification, Project

Alternatives, Project Estimate Approach, Customer Benefit, and Value Drivers. In addition, monthly spending and clearing data are provided by cost type for each capital project placed into service during the Capital Investment Period. Projects for which documentation is not provided are those with less than $25,000 cleared to plant-in-service during the Capital Investment Period and those cleared to plant in-service after September 30, 2028, which is the end of the Test Period. Project Estimate Approach is not provided for projects with less than $250,000 in spending. PNM is not seeking recovery for any capital investment projects that are projected to be in-service after the end of the Test Period.

Q. Please provide an overview of PowerPlan, the Company's capital budgeting system.

A. The Company utilizes PowerPlan to compile its capital budgets. For capital projects, information is populated into PowerPlan using capital templates, or directly through "ad hoc" updates. Information in PowerPlan is aggregated into basic account strings, which contain business segment, company, funding project, cost type, location, home center, and dollar amount data, as well as the month in which forecasted transactions will occur.

Q. Does PowerPlan contain capital information other than forecasted capital?

A. Yes. Actual information from other financial systems such as the general ledger is brought into the PowerPlan system. Actual information reflects the Company's

books and records and is used to provide ending balances or transactions to support new budget cycles. The actual capital balances at the end of the Base Period were used as the starting point for the capital forecast in this proceeding.

Q. What calculations does PowerPlan perform to complete the capital budget?

A. In addition to compiling budgeted data, the PowerPlan system performs numerous calculations necessary to complete the budget. For capital, system calculations include items such as the allocation of capital clearings to the various electric plant accounts (e.g., to accounts 353, station equipment, or other electric plant accounts as defined by the FERC Uniform System of Accounts), calculation of capital loads, and the clearing of construction to plant-in-service. In some cases, adjustments are needed to complete the capital budget.

Q. Please describe adjustments necessary to complete the capital budget.

A. Additional adjustments are made to reflect assumptions about future activity not otherwise captured during the capital budgeting process and which are necessary to complete the capital budget. For example, PowerPlan does not perform calculations to forecast retirements.

Q. Please explain why it is necessary to allocate plant additions to the electric plant accounts.

A. Capital budget information is loaded to PowerPlan at the general ledger account level. Similarly, clearings to plant-in-service are performed by transferring construction to plant-in-service at the general ledger account level (e.g., reduce FERC account 107 CWIP and increase FERC account 101 plant-in-service). It is necessary to allocate activity to the various electric plant accounts to determine how construction will be added to plant-in-service to calculate depreciation expense, which requires a combination of both the location and the electric plant account.

Q. Please describe the process to allocate plant additions to the electric plant accounts.

A. Based on historical clearings to plant-in-service, electric plant allocation rates are loaded to the system for most funding project types. Funding project type is a succinct descriptor of project purpose. PowerPlan uses plant allocation rates to perform a system calculation that allocates clearings for each project to the appropriate electric plant accounts. In many cases, the clearings to the electric plant accounts reasonably reflect anticipated future capital additions and no additional adjustments are needed. In other cases, more refinement is necessary to better allocate expected additions to the appropriate electric plant accounts.

Q. How did the Company determine the funding project type allocation rates utilized by PowerPlan to allocate budgeted clearings to the electric plant accounts?

A. The Company reviewed historical additions to plant-in-service by funding project type to determine rates used to allocate clearings to the electric plant accounts. Generally, PNM utilized a five-year period ending December 31, 2025, to determine average allocation rates to apply to forecasted capital additions for generation and corporate/Shared Services. Capital expenditures and clearings for the T&D segment have increased significantly in recent years. Therefore, the Company utilized a shorter, two-year, period ending December 31, 2025, to determine electric plant account allocation rates for Transmission and Distribution. The resulting allocation rates were entered into PowerPlan by funding project type to perform the systematic allocation of expected clearings to the electric plant accounts. The electric plant account allocation rates for each funding project type are provided in PNM Exhibit RNG-14.

Q. What refinement is provided by adjusting allocation rates?

A. In some cases, the allocation of clearings for a project cannot be reasonably reflected by funding project type relative to work being performed. In these cases, an evaluation of capital clearings for such funding projects is performed and electric plant allocation rates specific to that project are entered in PowerPlan to more

accurately allocate expected capital additions to the appropriate electric plant accounts. See PNM Exhibit RNG-13.

Q. Please describe cost of removal and why it is necessary to adjust for cost of removal in the capital budget.

A. As defined in the FERC USOA, cost of removal means the demolition, dismantling, tearing down or otherwise removing electric plant, including the cost of transportation and handling incidental materials. The majority of capital projects are performed to replace existing capital assets; therefore, it is not appropriate to abandon the retired assets in place. Instead, these assets are removed and disposed of, and the cost of these activities reflects the cost of removal. The Company does not separately budget removal costs. Instead, anticipated cost of removal is budgeted in PowerPlan as a component of CWIP and, like CWIP, is cleared to plant-in-service at anticipated completion dates. Therefore, it is necessary to reduce gross plant-in-service to reflect anticipated removal costs.

Q. Please describe how gross plant-in-service is adjusted in the budget for the forecasted cost of removal.

A. The forecasted cost of removal is determined using an estimated cost of removal rate (percentage) associated with capital expenditures by operating unit (i.e., distribution, transmission, individual generating plants, and corporate/shared services) based on historical experience, which is then adjusted for changes in

capital spending patterns if necessary. The historical periods used are the same as those used to calculate the allocation of clearings to the electric plant accounts discussed earlier. Cost of removal serves to reduce forecasted clearings to plant-in-service and the provision for accumulated depreciation, which reflects how forecasted cost of removal will actually be recorded (i.e., as a component of accumulated depreciation). Similar to other clearings to plant-in-service, the cost of removal must be allocated to the electric plant accounts, which is accomplished using the allocation to electric plant accounts process previously discussed. Corporate/Shared Services assets typically do not have cost of removal due to the nature of capital projects at the corporate/Shared Services entity. There are typically limited costs associated with removing a software system or removing office equipment. Therefore, the budget does not include a forecast for cost of removal for the corporate segment. PNM Exhibit RNG-10 provides historical CWIP and cost of removal expenditures (reflected in the exhibit as "RWIP") used to calculate forecasted cost of removal rates.

Q. Please describe retirements and why it is necessary to adjust for retirements in the capital budget.

A. A retirement occurs when an item of plant-in-service which, when retired, with or without replacement, is accounted for by crediting the book cost to the electric plant account in which it is included. In other words, a retirement occurs when an asset is removed from plant-in-service regardless of replacement. The Company

forecasts the retirement of specific assets as part of its capital budgeting process based on historical retirement activity as a basis for forecasting future retirements. PNM Exhibit RNG-9 provides for the historical retirements and provides retirements for linkage data and the Test Period.

Q. Please describe how the Company has adjusted plant-in-service for retirements.

A. PNM adjusted the plant-in-service for estimated retirements (dollar amounts) by major operating unit (i.e., distribution, transmission, individual generating plants and corporate/Shared Services) and electric plant account based on historical experience, adjusting as necessary for changes in retirement patterns. The historical periods used are the same as those used to calculate the allocation of clearings to the electric plant accounts and for cost of removal. However, for general plant assets (i.e., plant accounts 390 – 399) in distribution, transmission, generation and corporate/Shared Services, forecasted retirements are assumed to occur when assets are fully depreciated. Retirements are applied as reductions to electric plant-in-service and accumulated depreciation.

B. Capital Loads

Q. What is a capital load?

A. A capital load, normally referred to as a "load" or a "load factor," is the percentage of additional costs to be applied to base construction costs to reflect indirect costs incurred in support of the construction project.

Q. Why are capital loads applied to capital projects?

A. Direct costs are charged to each project during the construction phase of a capital project. In addition to these direct costs, the Company incurs costs in support of these construction activities that are administratively burdensome to direct charge to individual projects. These support costs are assigned to construction projects based on a load factor that is applied to direct costs. PNM utilizes capital load factors for payroll, material, engineering and supervision, capitalized fleet, and A&G. It is not cost effective or practical to charge support costs to each individual capital project; therefore, PNM utilizes capital loads or load factors to properly assign these costs to construction projects. In addition, the Company applies AFUDC (allowance for funds used during construction) and capitalized interest loads to capital projects using calculated rates as discussed later in my testimony.

Q. Please explain the capital load factors that have been applied to PNM's capital spending in this case.

A. Generally, capital load factors are calculated using actual and budget data in the year before they are used (e.g., 2027 load factors are calculated in 2026). Please see PNM Exhibit RNG-14 for a list of these capital load factors for 2025, 2026 and 2027. PNM utilized the 2027 capital load factors for 2028, because PNM does not anticipate significant changes to these load factors.

Q. What is AFUDC and capitalized interest?

A. AFUDC, or capitalized interest at Shared Services, reflects the cost of borrowed funds used for construction purposes and a reasonable rate of return on other funds used for construction. In other words, it represents capitalized interest cost and a reasonable return on capital expenditures during the construction period before plant is placed in service. PNM records AFUDC on its jurisdictional construction and nuclear fuel in process assets in accordance with FERC standards and guidelines. Shared Services records capitalized interest on its construction projects and major computer software projects.

Q. Please explain how AFUDC and capitalized interest rates were calculated for the linkage data and Test Period.

A. AFUDC rates are calculated using the AFUDC rate formula provided under FERC guidelines, which provides that rates be calculated using average balances of construction expenditures and short-term debt during the year at issue, as well as long-term debt and equity balances at the end of the prior year, including rates

associated with debt and equity balances. The capital forecast calculates AFUDC rates on a calendar year basis. The inputs and results of the Company's AFUDC rate calculation is provided in PNM Exhibit RNG-15. Capitalized interest rates at Shared Services are calculated using debt balances and exclude equity balances.

VI. OTHER MATTERS

A. Fully Functional Executable Models

Q. Has PNM complied with the FTY Rule regarding electronic filing requirements?

A. Yes. PNM is providing PNM Exhibit RNG-3 and RNG-4 in fully functional, electronic format. These files are being provided electronically through a file sharing secured website, so the amounts in schedules and workpapers can be easily traced, and assumptions used to develop the Test Period are provided in working electronic files. The combination of these two exhibits represents the cost of service functional model.

Instructions for accessing and saving the fully functional model can be found in PNM Exhibit RNG-2.

Q. Does the electronic model being provided have the same functionality and format as was filed in previously accepted cases before the Commission using a FTY?

A. Yes. The fully functional cost of service model has the same functionality and format as was provided by PNM in the 2024 Rate Case, 2022 Rate Case, 2016 Rate Case and 2015 Rate Case. The Hearing Examiners and Commission used this model for the final cost of service that was ultimately approved in those filings.

Q. Can you define some general terms when describing the working models?

A. Yes. The term "workbook" means an entire Microsoft® Excel file and "worksheet" refers to an individual tab within a Microsoft® Excel workbook. A linked workbook refers to an external Microsoft® Excel workbook outside of the existing Microsoft® Excel workbook. A linked worksheet refers to a worksheet within the existing Microsoft® Excel workbook.

Q. Please identify the workbooks that compose the cost of service functional model.

A. The following workbooks compose the cost of service working model:

- Folder – RNG-3 – Cost of Service
  - PNM Exhibit RNG-3 - WP COS.xlsx
- Folder – RNG-4 - Workpapers
  - WP Plant – Net Plant workpaper.xlsx
  - WP Plant – Corporate Net Plant workpaper.xlsx
  - WP RA – Regulatory Asset and Liability workpaper.xlsx
  - WP ORB – Other Rate Base workpaper.xlsx

- WP WC – Working Capital workpaper.xlsx
- WP OM – O&M workpaper.xlsx
- WP LA – Labor workpaper.xlsx
- WP SS – Shared Services workpaper.xlsx
- WP GT – General Taxes workpaper.xlsx
- WP OA – Other Allowable Exp. workpaper.xlsx
- WP Revenue Credits – Revenue Credits workpaper.xlsx
- WP Allocators ("AL") – Allocators workpaper.xlsx
- WP Fuel – Fuel Expense.xlsx

Each workbook should be used concurrently, and all workbooks should be open at the same time when attempting to modify or adjust any calculations in the cost of service models. This is further explained in PNM Exhibit RNG-2, as discussed below.

Q. Have you provided operating instructions on how to utilize the functional model for cost of service?

A. Yes. PNM Exhibit RNG-2 provides operating instructions on how users need to utilize the electronic files for cost of service included with this filing. It is important that users read and understand these instructions before attempting to utilize the cost of service functional model.

Q. Please describe the general format of the fully functional workbooks.

A. The first worksheet within each workbook will be the workbook lead sheet. The lead sheet provides a table of contents listing each worksheet included in the workbook, a brief description of the worksheet, and the purpose of each worksheet. In addition, the lead sheet summarizes where information required on that worksheet is provided from another linked workbook or linked worksheet as well as provides where information on the worksheet is linked to another linked worksheet or linked workbook. Further, the printed copy of certain worksheets includes summations of groups of data for which the underlying detail is too voluminous to be printed in a meaningful format but can be readily viewed on-line in the electronic spreadsheet format.

Q. Have you identified any sections within the cost of service model that are not fully functional as described by the FTY Rule?

A. Yes. As provided for in the FTY Rule, PNM has identified the following cost of service sections as not fully functional:

- ADIT – Please refer to the testimony of PNM witness Morris.
- Test Period Fuel – Fuel calculations as provided by AURORA.
- Income Taxes – Please refer to the testimony of PNM witness Morris for further discussion.
- Cash Working Capital – This calculation is not fully functional and is not linked electronically to the PNM Exhibit RNG-3. However, PNM has

provided Rule 530 Schedule E-1 in executable electronic format through Dropbox. Users can manually change the inputs to recalculate cash working capital in this schedule.

- Capital Budget – The allocation of capital clearings to electric plant accounts, plant retirements and cost of removal and the application of capital loads to determine final capital spending amounts are performed by PowerPlan and cannot be replicated. Additionally, the cost of service model relies on hard inputs of retirements for G&I plant, based on existing accounting schedules for the linkage data and Test Period, as shown in PNM Exhibit RNG-4, WP Plant.
- ARO accretion expense – These calculations are not fully functional as the underlying assumptions as discussed earlier in my testimony are too complex to model in an executable format.
- Depreciation expense for certain FERC plant accounts that are based on existing amortization schedules as discussed earlier in my testimony.
- A&G Capital load offsets, included in O&M, that are based on system calculations of the capital load as applied to capital projects. The offset is included as a reduction to O&M expense.

Q. Have you identified specific calculations within the cost of service working models that are not fully functional?

A. Yes. PNM identified on each worksheet what information is provided as a hard input and has provided references to testimony identifying the reasons for not providing a fully functional calculation. These can include calculations that are supported by other PNM witnesses and are not contained in the linked workbooks within the cost of service functional model. In addition, accounting and other relevant data are extracted and formatted from PNM's existing software programs and used to populate the cost of service functional model. All Base Period information is reflected as hard inputs and referenced to the Company's books and records.

Q. Will PNM rerun input changes as reasonably requested by the Staff or intervenors in order to capture the impact of such proposed input changes on the Test Period revenue requirements?

A. Yes. In accordance with 17.1.3.11 NMAC, PNM will rerun calculations reasonably requested by Staff or intervenors to capture the impacts on the proposed cost of service made through programs which PNM is unable to provide in fully functional format.

B. Grid Modernization

Q. Is PNM including grid modernization investments in this proceeding?

A. Yes. PNM has included the Grid Modernization ("Grid Mod") investments identified and approved in the application and corresponding Final Order for Case No. 22-00058-UT.

Q. What was the determination of the Grid Mod Rider treatment in the Final Order of Case No. 22-00058-UT?

A. The Final Order in Case No. 22-00058-UT concluded that the collection of costs for Grid Mod investments will roll over from the rider and into base rates at the time of PNM's next rate case, at which point, the rider will be reset to zero.

Q. How has PNM calculated the Grid Mod revenue requirement in this case?

A. PNM has calculated the revenue requirement consistent with 17.1.3 NMAC, Future Test Year Period Filing Requirements. Components of the revenue requirement include net plant and operations and maintenance expenses ("O&M") forecasted for the Test Period of October 1, 2027, through September 30, 2028, in the non-fuel revenue requirement in PNM Exhibit RNG-3. Additionally, tax impacts have been calculated on such amounts.

Q. How does this calculation differ from the Grid Mod Rider?

A. The Final Order in Case No. 22-00058-UT requires the rider to be collected based on historic costs. For example, the 2026 Grid Mod Rider was set in Case No. 26-0000048, which calculated the revenue requirement based on 2025 costs. As a result, PNM reflected the transfer of rider dollars to base rates in the 2028 Grid Mod Rider in order to align with when the proposed base rate change goes into effect.

Q. What is the revenue requirement for Grid Mod?

A. The total revenue requirement relative to Grid Mod is $56.0 million. Please refer to PNM Exhibit RNG-3, Grid Mod category column. PNM has maintained a category allocation column specific to Grid Mod revenue requirement, which is then added in PNM's Base Rate jurisdiction.

Q. How does the Test Period revenue requirement align with the most recent plan filing made to the commission in Docket 26-0000069?

A. The revenue requirement included in this proceeding is consistent with the revenue requirement calculated in Docket 26-0000069, relative to partial year 3 and partial year 4, consistent with PNM's Test Period in this proceeding of the twelve-month period ended September 30, 2028.

Q. What is the impact of including Grid Mod in this proceeding on the 2026 Grid Mod Rider?

A. There is no impact on the 2026 Grid Mod Rider set in Case No. 26-0000048, as the historic costs are not included in the Test Period of this proceeding and will be fully collected before rates from this proceeding are expected to go into effect.

Q. What is the impact on the 2027 Grid Mod Rider?

A. There is no impact on the 2027 Grid Mod Rider. PNM plans to file a reconciliation filing based on 2026 historic costs that are not included in the test year of this proceeding. PNM plans to make the reconciliation filing in March of 2027, which will set rider rates for April 15, 2027 through April 14, 2028.

Q. How does PNM propose to treat the 2028 Grid Mod Rider?

A. The 2028 Grid Mod Rider would be based on the 2027 investments, which are partially included in the Test Period of this proceeding. PNM proposes the deferral of 2027 costs through September of 2027 to be included in this proceeding in a regulatory asset ("2027 Grid Mod Regulatory Asset") with no return on the asset. This would allow PNM to set the 2028 Grid Mod Rider to zero in that year.

Q. What is the proposed amortization period of the 2027 Grid Mod Regulatory Asset?

A. PNM is proposing a 5-year amortization period on the regulatory asset associated with Grid Mod investments between January 1, 2027, and September 30, 2027. This further reduces customer impact by spreading the recovery over five years, rather than the one-year recovery that is allowed through the rider.

Q. Does PNM plan to continue to make annual filings?

A. Yes. PNM will continue to make annual filings with the Commission in its Grid Mod proceedings for both the review filing, which presents updated plan detail for future years, as well as reconciliation filings which presents the prior year actual costs.

Q. Does PNM plan to continue to use the Grid Mod Rider?

A. Yes. After the Test Period of this proceeding, PNM will continue to file its annual Grid Mod Rider updates for incremental investments or savings from what is currently reflected in base rates.

Q. How does PNM plan to reflect differences between the forecasted future Test Period revenue requirement and the actual Grid Mod costs?

A. Once costs are reflected in base rates, they will be a part of the full costs of service and no longer able to be tracked as part of an over or under collection. Therefore, PNM will use the Test Period revenue requirement for O&M as the baseline for incremental O&M costs or savings. Then, for capital investments, PNM will track

all new capital investments that occur beginning October 1, 2028, for inclusion in the future rider.

Q. Please summarize the timeline of Grid Mod recovery.

A. See PNM Table RNG-15 below for a summary of the Grid Mod recovery timeline.

PNM Table RNG-15
Grid Mod Recovery Timeline

Investment Period	Recovery Mechanism	Collection Period	Over-Under included in Rate
1/1/2025 - 12/31/2025	2026 Rider	4/15/2026 - 4/14/2027	N/A
1/1/2026 - 12/31/2026	2027 Rider	4/15/2027 - 4/14/2028	N/A
1/1/2027 - 9/30/2027	Regulatory Asset	10/1/2027 - Future Rate Case	2027 Reconciliation Filing
10/1/2027 - 12/31/2027	Base Rates	10/1/2027 - Future Rate Case	2027 Reconciliation Filing
1/1/2028 - 9/30/2028	Base Rates	10/1/2027 - Future Rate Case	2028 Reconciliation Filing
10/1/2028 - 12/31/2028	2029 Rider	4/15/2029 - 4/14/2030	N/A
1/1/2029 - 12/31/2029	2030 Rider	4/15/2030 - 4/14/2031	N/A
1/1/2030 - 12/31/2030	2031 Rider	4/15/2031 - 4/14/2032	N/A

Q. Has PNM accounted for the retirement of legacy meters?

A. Yes. PNM has removed the net book value of legacy meters from rate base as they are projected to be replaced by AMI meters. Refer to PNM Exhibit RNG-4 WP OA-3 for the projection of the AMI meter rollout and calculation of plant retirements. Refer to PNM Exhibit RNG-4 WP Plant for the removal of gross plant activity and accumulated depreciation balances.

Q. How has PNM accounted for the undepreciated investment in legacy meter retirements during the Test Period?

A. Consistent with the Final Order in Case No. 22-00058-UT, PNM has included a regulatory asset for the undepreciated investment associated with legacy meters as they are replaced with AMI meters. PNM has modeled the retirement of legacy meters from plant in line with the projected rollout of AMI meters. When the legacy meters are retired from plant, they are reflected in the regulatory asset, where they continue to depreciate at the approved rate until the beginning of the Test Period. At the beginning of the Test Period, the undepreciated asset begins amortization based on a 10-year period, consistent with the Recommended Decision. Refer to PNM Exhibit RNG-4 WP OA-3 for the projection of AMI meter rollout and the calculation of the regulatory asset and amortization.

Q. Is PNM requesting a return on this regulatory asset?

A. Consistent with the Final Order in Case No. 22-00058-UT, PNM is not requesting a return on this regulatory asset and has therefore not included it in rate base.

Q. How has PNM accounted for the retirement of legacy meters prior to the Test Period?

A. PNM has projected the legacy meter retirements from the beginning of the rollout period to the beginning of the Test Period and calculated the return on those assets that is currently being recovered in PNM's base rates. PNM then established a regulatory liability for the return on the legacy meters to give that return back to customers as they are no longer used and useful. PNM has used a two-year

amortization period on this regulatory liability to accelerate the benefit being passed on to customers.

C. Extended Day-Ahead Market ("EDAM")

Q. How does PNM collect fuel costs from customers?

A. PNM collects its fuel revenue requirement through the Company's FPPCAC. In accordance with the FPPCAC, PNM projects its fuel revenue requirement on an annual basis for the 14-month period of November 1 through December 31.

Q. Is PNM proposing any changes to the cost components included in base fuel, in the adjusted base period from the components currently included in PNM's FPPCAC?

A. Yes. PNM is requesting the EDAM revenues to be included as a revenue credit in the FPPCAC. The nature of transmission revenue prices upon joining EDAM will be driven by the same market activity that affects fuel and purchase power costs, as well as becoming more variable, making the return of transmission revenue through the FPPCAC as opposed to base rates a more reasonable approach. To facilitate this request, PNM is providing the projected Test Period fuel revenue requirement in this case that includes the EDAM revenue credits. PNM is requesting that after approval of a final order in this case that its fuel revenue requirement be adjusted

to include the EDAM revenue credits in order to determine the rates charged under the FPPCAC.

Q. When does PNM plan to enter into EDAM?

A. PNM plans to enter EDAM in October 2027.

Q. What transmission revenues will be impacted by PNM's participation in EDAM?

A. EDAM participation will impact Firm PTP transmission service revenue, both long-term and short term, as well as transmission line loss revenue, otherwise referred to as "Real Power Losses."

Q. How have these transmission revenues historically been reflected in rates?

A. PNM's base rate revenue requirement currently includes revenue credits relative to PTP transmission services, which are earned from a transmission customer through the sale of transmission capacity between a specified point of delivery and point of receipt at the rate set through FERC's OATT. Additionally, Real Power Losses are paid by transmission customers for the energy losses associated with the moving of electricity across PNM's transmission system.

Q. How will participation in EDAM affect PNM's transmission revenues?

A. PNM anticipates PTP transmission revenue would be minimized upon the entrance into EDAM as PNM's transmission rights will be scheduled into the day ahead market, leaving less capacity for direct sale through PTP services. Additionally, Real Power Losses would cease to be settled financially by transmission customers, thereby eliminating this transmission revenue. However, EDAM activities compensate for transmission losses through transfer revenues as a component of Market transaction pricing. Transfer revenues will be derived from transfer volume multiplied by the market price. Additionally, EDAM provides for congestion revenues as another potential benefit. Congestion revenue is driven by transmission constraints in other balancing authorities. Transmission constraints and excess capacity drive market price differences between balancing authorities, providing for economic incentive to buy and sell capacity.

Q. Why is it appropriate to include EDAM revenues in the FPPCAC?

A. Because the EDAM transfer and congestion revenue will be a component of the market price and is driven by the same market activity that affects fuel and purchase power costs, it is appropriate to flow these revenues through the FPPCAC to align the variable revenues with the variable costs. NMPRC Rule 550 states that the objective of the FPPCAC is to provide for the stability of earnings and permit prompt credits to customers when costs are declining. Given the volatility of market

prices between balancing authorities as described above, it is appropriate to flow both the fluctuation of costs and revenues back to customers timely.

Q. Is there Commission precedent for the treatment of the types of revenues created by an energy trading market?

A. Yes. PNM's entrance into the Energy Imbalance Market ("EIM") was reviewed by the Commission in Case No. 18-00261-UT. Similar to EDAM, the EIM energy is traded between balancing authorities through the market at variable prices. While EIM makes such trades in real time, EDAM schedules the trades one day in advance. PNM's participation in EIM produces congestion revenues that are currently returned to customers through the FPPCAC. Pursuant to the Commission's directives, PNM flows EIM sales and revenues through the FPPCAC.

Q. What are the impacts to the Test Period fuel and non-fuel revenue requirements?

A. The reclassification of EDAM related revenues from base rates to FPPCAC results in an increase of $25.6 million to the base rate revenue requirement, with an offsetting decrease of $25.6 million to the FPPCAC revenue requirement. Actual EDAM sales and revenues will be reflected in PNM's monthly FPPCAC filings, as is done for EIM sales and revenues.

Q. How has PNM forecasted the benefits of EDAM?

A. PNM has relied on a market study performed by the Brattle Group, a third-party energy industry consultant. The study forecasts market participation benefits. Refer to PNM Exhibit RNG-17 for a copy of the study presentation. Slide 8 includes total projected congestion revenue for EDAM and the Western EIM totaling approximately $25.6 million annually. However, this does not account for existing transmission revenues that will be replaced by EDAM revenue, as described earlier in my testimony. Therefore, PNM has taken the total congestion revenue projected by Brattle, less forecasted PTP and Real Power Losses. The remaining balance is assumed to be the net benefit. Total EDAM net benefit for the test period is forecasted to be $13.2 million.

Q. What costs has PNM included in the Test Period base rates related to EDAM?

A. PNM has included incremental O&M relative to the entrance into EDAM for a Market Settlement Analyst with total labor cost of $0.1 million. Additionally, PNM has included the amortization expense of $0.6 million for the $3.1 million EDAM integration cost regulatory asset that was approved in Case No. 25-00059-UT. Refer to PNM witness Gray for further discussion of the incremental O&M. I discussed the regulatory asset and amortization in greater detail previously in my testimony.

Q. Has PNM performed a cost benefit analysis for its entrance into the EDAM market?

A. Yes, please refer to PNM Exhibit RNG-16 for the full cost benefit analysis, including the revenues and costs described above, as well as relative capital investments**.** The cost benefit analysis indicates a net anticipated benefit in year one of $10.0 million to customers due to the entrance into the EDAM market.

D. Senate Bill 170

Q. What is New Mexico Senate Bill 170 ("SB170")?

A. SB170 (codified as Section 62-6-26(E) through (G)) of the Public Utility Act) was designed to facilitate large economic development projects by allowing utilities to invest in infrastructure in anticipation of future load growth customers, while deferring the invested costs until the load has materialized.

Q. Has PNM included any SB 170 projects in the Test Period?

A. Yes, PNM was granted SB170 treatment for the Westpointe 40 substation project, which is projected to clear in May through September of 2027.

Q. Is the economic development load projected to materialize during the Test Period to warrant inclusion in rates?

A. Yes, PNM's load forecast includes the projected load growth for the customer that the Westpointe 40 project is intended to serve beginning in October of 2027.

Q. Has PNM deferred costs associated with the SB170 project to a regulatory asset, as allowed by the statute?

A. No. As the load and associated revenues are projected to be online in the Test Period, it is not necessary to defer any costs.

VII. REQUESTED REGULATORY APPROVALS

Q. Please identify regulatory assets and liabilities that are being requested in this proceeding.

A. Please refer to PNM Table RNG-16 below for the regulatory assets and liabilities PNM is including in the Test Period revenue requirement that are being requested for recovery in this proceeding.

PNM Table RNG-16
Summary of Regulatory Assets and Liabilities Being Requested in this Proceeding

Regulatory Asset/Liability	Included in Rate Base	Test Period Amortization	Amortization Period (Years)	NMPRC Case No. Establishing Regulatory Asset/Liability*
ITC - Sunbelt BESS & Solar- Regulatory Liability	Yes	$ (3,948,482)	5	N/A
ITC - Distribution Phase 2 BESS- Regulatory Liability	Yes	$ (3,536,481)	5	N/A
2026 Rate Case Expenses - Regulatory Asset	Yes	$ 827,400	5	N/A
FERC 893 Cyber Security - Regulatory Asset	Yes	$ 763,987	5	N/A
ESA Damages - Regulatory Liability	Yes	$ (562,689)	5	N/A
2027 Grid Modernization - Regulatory Asset	No	$ 4,238,858	5	N/A

* Case number reference is the case the establishes the authority to record the regulatory asset or liability. If "N/A", PNM is requesting the authority in this proceeding.

Q. Please describe the Investment Tax Credit ("ITC") regulatory liabilities.

A. The Certificate of Stipulation in the 2024 Rate Case required PNM to work with Signatories to explore options for monetizing ITCs to provide more timely credits passed on to customers. Consistent with the Stipulation, PNM identified

opportunities to monetize ITCs associated with the Sandia BESS, Sunbelt Solar, the Sunbelt BESS and the Distribution Phase 2 BESS, which are forecasted to be earned during the Test Period. PNM is proposing a regulatory liability for Sunbelt Solar and BESS for a total of $79.0 million, which would be achieved in June 2028 reflecting a 13-month average of $23.7 million included in the Test Period. In addition, PNM is proposing a regulatory liability for the Distribution Phase 2 BESS of $23.6 million, which would be achieved in December 2027, reflecting a 12-month average of $16.8 million included in the Test Period. PNM is proposing a 5-year amortization period for the ITC regulatory liabilities. The regulatory liabilities will amortize as a reduction to tax expense. Refer to the direct testimony of PNM witness Morris for additional discussion on the tax treatment.

Q. Please describe the 2026 Rate Case Expenses regulatory asset being requested.

A. PNM is seeking to recover $4.1 million of expenses associated with this proceeding, over a 5-year amortization period. Descriptions of the expenses are discussed in more detail above and in PNM Exhibit RNG-11. Additionally, projections of expenses can be seen in PNM Exhibit RNG-4 WP ORB-12.

Q. Please describe the FERC No. 893 Cyber Security regulatory asset being requested.

A. PNM is requesting a regulatory asset to defer cyber security expenditures eligible for deferral under FERC Order No. 893. FERC Order No. 893 provides a

framework for utilities to defer certain expenses associated with advanced cyber security technologies in order to encourage utilities to invest in the reliability and security of the grid and to benefit customers. PNM believes similar treatment is appropriate for its New Mexico Base Rate jurisdiction. PNM is proposing a regulatory asset totaling $3.8 million, with a 5-year amortization period. PNM witness Phelps discusses the underlying cyber security activities and the operational need for these expenditures.

Q. Please describe the ESA Damages regulatory liability being requested.

A. The ESA Damages regulatory liability reflects damages PNM received from developers under ESAs, primarily when a project does not meet contractual requirements. PNM is proposing a regulatory liability totaling $2.8 million, with a 5-year amortization period in order to pass these credits on to customers.

Q. Please describe the 2027 Grid Modernization regulatory asset being requested.

A. PNM is requesting a regulatory asset for Grid Mod costs incurred between January 1, 2027, and September 30, 2027, of $21.2 million, with a 5-year amortization period and no return on the asset. Details of the treatment of Grid Mod costs are discussed in greater detail previously in my testimony.

Q. Is PNM requesting the authorization to establish any additional regulatory assets or liabilities that are not included in the Test Period?

A. Yes. PNM is requesting authorization to establish a regulatory asset or liability for the low-income rate proposed in this proceeding. Due to the variable nature of the projection of participation in the low-income rate, PNM is proposing a regulatory asset or liability be established for differences in participation levels and costs to achieve the participation. Please refer to the Testimony of PNM witness Aguirre for further discussion on this treatment.

Additionally, PNM is proposing to continue the ESA regulatory asset and regulatory liability treatment established in the 2024 Rate Case which allowed for the tracking of the differences in actual ESA costs compared to what is included in base rates in a regulatory asset or regulatory liability. The 2024 Rate Case stipulation limited this treatment to the period of time from the agreement until PNM's next filed rate case; however, given the increasing need to add incremental energy storage on PNM's system and the timing of when these resources are placed in service, it is prudent to track these costs in a regulatory tracking mechanism.

Q. Please describe the rider associated with tax flow through credits that PNM is proposing to establish.

A. PNM is proposing the establishment of a tax credits rider to adjust tax credits included in rates to the actual flow-through tax credits the Company records for a given year. The tax rider mechanism would allow for more timely and complete passing of benefits to customers associated with earned and monetized ITCs and

Production Tax Credits ("PTC"), as well as differences in variable Excess Deferred Federal Income Tax ("EDFIT") amortizations. For example, in accordance with the FTY Rule, ITCs included in this proceeding only provide for a partial year give back of ITCs earned during the Test Period, while a rider mechanism would allow for the full credit to be more timely passed on to customers. Additionally, due to the variable nature of the forecasted earned amount and timing of the ITCs, this would allow PNM to true up any differences to ensure customers receive the full benefit. Refer to the direct testimony of PNM witness Kyle T. Sanders for further discussion of the proposed rider.

Q. Is there Commission precedent for a mechanism such as the tax rider the Company is Proposing?

A. Yes, El Paso Electric ("EPE") proposed a rider to capture the benefits of the Tax Cuts and Jobs Act ("TCJA") in NMPRC Case No. 18-00016-UT. In that case, EPE created a Federal Tax Credit Factor ("FTCF") to account for the differences in tax rates and EDFIT versus what was currently included in rates to ensure the benefits of the TCJA were timely reflected in customer rates.

VIII. CONCLUSION

Q. Please summarize your conclusions with regard to PNM's cost of service study and the resulting revenue requirement proposed by PNM.

A. PNM's cost of service study meets the requirements of Rule 530 and the FTY Rule and presents PNM's reasonable costs of providing retail service to its customers during the Base Period and the Test Period. In addition, PNM's cost of service study has been provided in a fully functional model format, except as otherwise explained, pursuant to the FTY Rule. PNM's Base Period data is taken from its historical books and records. PNM provided linkage data and additional information through testimony, exhibits and Rule 530 Schedules that fully explain how the Base Period historical data from PNM's books and records have been developed in the Test Period to fully justify the forecasted reasonable costs of providing service at the time when PNM's proposed rates are expected to be in effect. The resulting proposed Test Period revenue requirement is reasonable and should be approved by the Commission.

Q. What are your general conclusions?

A. PNM's request for a non-fuel revenue requirement increase of $286.3 million, based on an after-tax WACC of 7.53% and a rate base of $4.2 billion is reasonable, justifiable and should be approved. The details of the Base Period, Adjusted Base Period, linkage data and the Test Period are properly shown on the Rule 530 Schedules in accordance with Rule 530 as supplemented by the FTY Rule. The Test Period results demonstrate revenue requirements that are just and reasonable, as further supported by other PNM witnesses.

Q. Does this conclude your direct testimony?

A. Yes.

GCG#536205

PNM Exhibit RNG – 1

Statement of Qualifications

Is contained in the following 1 page.

REINA N. GUTIERREZ
EDUCATIONAL AND PROFESSIONAL SUMMARY

Name: Reina N. Gutierrez

Address: PNMR Services Company
MS 1105
414 Silver SW
Albuquerque, NM 87102

Position: Senior Manager, Cost of Service

Education: Bachelor of Business Administration – Accounting, University of New Mexico, 2016

Licenses and Certifications:

Certified Public Accountant, New Mexico State Board of Accountancy, 2019

Professional Experience:

PNMR Services Company:
Senior Manager, Cost of Service (Current)
Manager, Corporate Budget (2023-2025)
Project Manager, SEC Reporting (2019-2023)

Senior Accountant, Axiom CPAs and Business Advisors (2017-2019)
Staff Accountant, Axiom CPAs and Business Advisors (2016-2017)
Bookkeeper, UPS (2015-2016)

Testimony and Affidavits Filed:

- In the Matter of Public Service Company of New Mexico's First Annual Grid Modernization Review Filing Pursuant to the Commission's Final Order, Docket No. 25-00049-UT (filed June 16, 2025).
- In the Matter of Public Service Company of New Mexico's First Annual Grid Modernization Reconciliation Filing Pursuant to the Commission's Final Order, Docket No. 26-0000048 (filed March 2, 2026).
- In the Matter of the Application of Public Service Company of New Mexico for Approval of Renewable Energy Rider No. 36 Pursuant to Advice Notice No. 439 and for Variances from Certain Filing Requirements, NMPRC Case No. 12-00007-UT (filed April 1, 2026) *(PNM's Rider No. 36 Reconciliation for 2025.)*
- In the Matter of Public Service Company of New Mexico's Second Annual Grid Modernization Review Filing Pursuant to the Commission's Final Order, Docket No. 26-0000069 (filed April 10, 2026).
- In the Matter of Texas-New Mexico Power Company's Election to File a Single Annual Proceeding to Adjust Non-Fuel Rates on a System-Wide Basis Under Pura § 36.216, PUCT Docket No. 59944 (filed September 1, 2026)

PNM Exhibit RNG – 2

Instructions for Cost of Service Functional Model

Is contained in the following 6 pages.

INSTRUCTIONS FOR COST OF SERVICE FUNCTIONAL MODEL

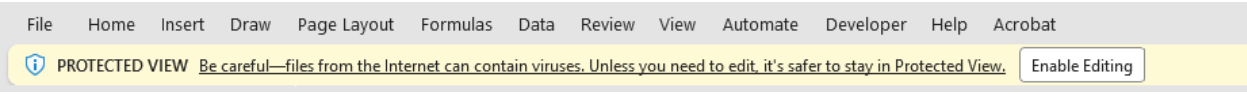
INTRODUCTION: The Cost of Service Functional Model ("Cost of Service Model") consists of the Microsoft Excel ("Excel") file PNM Exhibit RNG-3 – WP COS.xlsx located in the "PNM Exhibit RNG-3" folder and supporting workpaper Excel files located in the "PNM Exhibit RNG-4" folder within the "Cost of Service Model" folder.

PNM Exhibit RNG-3 – WP COS.xlsx contains the Company's Cost of Service studies in this proceeding, including Cost of Service studies for the Adjusted Base Period and the Test Period. The Cost of Service studies provide the jurisdictional allocations of the Company's revenue requirements to PNM Retail and other PNM jurisdictions.

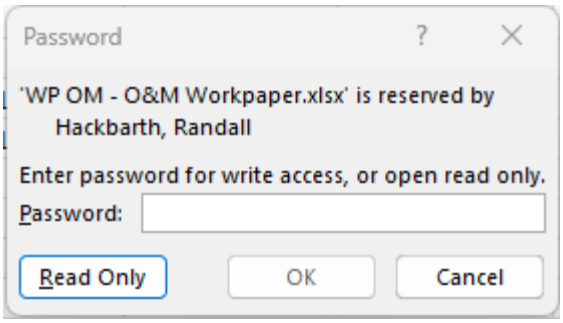
The supporting workpapers contained in the folder "PNM Exhibit RNG-4" consists of 13 Microsoft Excel workbook files that support various sections of the Cost of Service Model. PNM Exhibit RNG-4 WP Index.docx contains the Workpaper Index of the Microsoft Excel workbooks and descriptions of individual worksheets within each Microsoft Excel workbook.

SECTION I: INSTRUCTIONS FOR SAVING THE COST OF SERVICE FUNCTIONAL MODEL TO LOCAL DRIVE

1. Access the PRCe360 Case Management and eFiling System or the DFS Venue Website and proceed to the NMPRC Docket No. 26-0000___- Rate Change 2027 COS Model
2. Download the zip file named "PNM Exhibit RNG-3-RNG-4 - COS Model.zip"
    a. Note: PNM has submitted Fully Functional Models as PNM Exhibits RNG-3 and RNG-4 with the Application to the PRC. PNM cannot predict the default file name that ePRC360 will try to save on your machine.
3. Save the zip file onto your local machine.
4. Locate the file location of the zip file
5. Right click the zipped file and unzip or extract all
6. It will ask you to select a Destination and Extract Files, it is suggested to retain the suggested name and select "Extract".
7. Open the newly extracted folder that was named as the saved zip file from Venue and open all of the files
8. When each file opens, click Enable Editing.



9. Next, you will be prompted to enter a password. It is suggested that you click on "Read Only" to ensure the data integrity of the file is retained. However, if you anticipate making **and** saving changes, the password for all files is "1234".



10. Depending on your settings in Microsoft Excel, you may also be prompted with a security warning indicating Automatic update of links has been disabled. To ensure any changes made to the Cost of Service Model are successful, the user should select "Enable Content" when prompted.

SECTION 2: NAVIGATING THE COST OF SERVICE MODEL

1. With all Excel Files open, it is suggested that you start navigation within PNM Exhibit RNG-3 – WP COS.xlsx. Within this file, the worksheet titled "Lead Sheet COS" provides general notes for navigating the Cost of Service studies and references the applicable Excel file workpapers for the respective sections of the Cost of Service Model.
2. Following the linked formulas within a given cell, in PNM Exhibit RNG-3 – WP COS.xlsx, will allow the user to trace the values back to the supporting workpapers.
3. A navigation shortcut may be used to open the linked supporting workpaper in PNM Exhibit RNG-4 from within a cell in PNM Exhibit RNG-3 – WP COS.xlsx. For cell inputs that are linked to another worksheet or another Excel file, press "Ctrl" + "[". This will take you directly to the linked number in the applicable worksheet or Excel file. Note: if a cell input has links to multiple cells, the "Ctrl" + "[" shortcut will only take you to the first referenced linked cell.

SECTION 3: USING THE COST OF SERVICE FUNCTIONAL MODEL

1. To ensure that any modeling changes that you intend to make will properly flow through the Cost of Service, all Excel files should be open while any data manipulation is being performed. A total of fourteen (14) workbooks (PNM Exhibit RNG-3 & PNM Exhibit RNG-4) should be open when making any changes.
2. It is important to ensure that when the Excel files are opened, you are not in "Read Only" mode. If you have saved the files in a manner that leaves the password intact, the password (i.e 1234) should be entered. If you are in "Read Only" mode, then any changes that are made will not be saved.

3. Included on PNM Exhibit RNG-3 – WP COS.xlsx is a worksheet labeled "Test Change Log." The purpose of this worksheet is to provide users with a check figure to show the result of any modeling changes they have made or to help determine whether they have unintentionally made a change to the Cost of Service studies or supporting workpapers that has resulted in a change to the Test Period revenue requirements.
4. Input values or cells are identified with a grey highlight in the spreadsheet within the Excel files, indicating areas where any modeling change should be made. Making changes in these cells will help ensure formulas and the functional model stay intact.
5. **Certain formulas within the model contain complex "array formulas." These formulas can be broken if manipulation is attempted in these cells. Modeling changes should not be attempted in any cells that contain formulas. Changes should only be made to grey highlighted areas (hard input numbers) within the worksheets. If changes are made to a cell that contains a formula (white areas), the models may not function properly. Additionally, the insertion or deletion of a row or column within the functional model will cause references to be changed and break the functionality of the model (the only exception to this is in the "Change Log" as described in step 7 below).**
6. To make changes to the cost of service functional model:
    a. Column H in "PNM Exhibit RNG-3 COS Test" is titled "Other Manual Adjustment" and highlighted in grey. A user may input any adjustment they are recommending in these fields and the impacts of this change will flow through the Test Period Cost of Service study. Changes made in these columns DO NOT flow back into the supporting workpapers but do appear in the Test Change Log. This is the suggested method for making changes to the Test Period revenue requirement.
    b. A user can make specific changes on the individual workpapers. If this approach is preferred, it is suggested that users begin within the Cost of Service Excel file (PNM Exhibit RNG-3 WP –COS.xlsx) and trace back the specific line item they wish to adjust back to the supporting workpaper and ultimately back to the supporting input that derives the test period values.
7. Initially, the change log information should provide a check figure of "-", which indicates the files agree to Test Period revenue requirement that was originally filed.
   Note: The Test Change Log is not required to be utilized but is a tool to help users identify and track changes made to the cost of service model. The Test Change Log is only applicable to the Test Period revenue requirement.
   See below:

PNM Exhibit RNG - 3 Test Change Log			
Test Change Log			
Test Period	Non-Fuel Revenue Requirement	Fuel Revenue Requirement	Total Base Rate Revenue Requirement
Description			
Preliminary Test Period - Base Rate	1,228,438,144	134,138,322	1,362,576,466
Adjustments:			
	1,228,438,144	134,138,322	1,362,576,466
	-	-	-

As indicated above, Row 22, Column C-E shows that the change log is zero, and therefore no changes have been made to the filed Test Period revenue requirements.

Upon making a modeling change, the impact to PNM Retail's revenue requirements will appear in Row 22, Column D-E quantifying the impact of each proposed adjustment. See below for an illustrative example:

PNM Exhibit RNG - 3 Test Change Log			
Test Change Log			
Test Period	Non-Fuel Revenue Requirement	Fuel Revenue Requirement	Total Base Rate Revenue Requirement
Description			
Preliminary Test Period - Base Rate	1,228,438,144	134,138,322	1,362,576,466
Adjustments:			
	1,228,438,144	134,138,322	1,362,576,466
	(1,000,000)	-	(1,000,000)

Once the user has confirmed that the proposed adjustment is correct, the user should use the "Paste Value" function in Microsoft Excel to paste the amount of the adjustment beginning in Row 10, Column D-E and enter a description of the basis of this change. Then use the subsequent rows

in Column D-E for the next set of adjustment. If the user does not know how to use the "Paste Value" function, you can manually enter the adjustment as well. Once the change is pasted or typed into the cell, the change log will revert back to zero as the check figure, as shown below. This will allow additional modeling changes to be made for each subsequent adjustment by repeating the steps above.

PNM Exhibit RNG - 3 Test Change Log			
Test Change Log			
Test Period	Non-Fuel	Fuel	Total Base Rate
Description	Revenue Requirement	Revenue Requirement	Revenue Requirement
Preliminary Test Period - Base Rate	1,228,438,144	134,138,322	1,362,576,466
Adjustments:			
Example 1 of Change - Enter Description	(1,000,000)	-	(1,000,000)
	1,227,438,144	134,138,322	1,361,576,466
	-	-	-

If necessary, additional rows may be inserted to capture additional changes made to the Cost of Service Model. As stated in step 5 above, this is the only worksheet for which rows can be added without damaging the integrity of the model.

SECTION 4: GENERAL NOTES

1. The Excel files have been password protected to maintain the integrity of the filed data. The Password for the files is "1234".
2. The Cost of Service Model has been built using Microsoft Excel 365. PNM is not able to verify if the Cost of Service Model and its functionality will be impaired if a different version of Microsoft Excel is used.
3. Each Microsoft Excel file includes a "Lead Sheet". The Lead Sheet provides an index of all worksheets included in the Excel file, as well as a brief description and purpose of the worksheet. In addition, the Lead Sheet provides a listing of where information on that worksheet provides information to other worksheets or Microsoft Excel workbook files and the source location of the information on that worksheet.
4. Each worksheet's title on the Lead Sheet is a hyperlink within the Microsoft Excel workbook file. A user can click on the hyperlink and it will navigate them to that worksheet. Within each worksheet is a hyperlink that will take the user back to the Lead Sheet. This function was added to help the user navigate between worksheets within an Excel file.

5. Certain worksheets utilize the outline function in Microsoft Excel. The purpose of using the outline function is to group certain information that is required to ensure functionality, but which results in a voluminous amount of information to be shown in a Microsoft Excel workbook file. An outline is identified in Microsoft Excel with a "+" sign in the row or column. If the outline is expanded, this is identified as a "-" sign in the row or column. A user can expand or collapse the group outline when using the electronically filed cost of service functional model.
6. Base Period information provided from the Company's books and records are hard input numbers in the Functional Cost of Service Model.
7. Although users can use the links provided in the cost of service functional model, the workpapers also include manual referencing to worksheets or Excel files to help aid the user in navigating the worksheets and Excel files.
8. Certain files are of a considerable size and will potentially cause a computer that is running them to perform more slowly than normal. Unless a user is making modeling changes, it is suggested that users turn the calculation option within the Microsoft Excel file to "manual", which will increase the speed of navigating through the file. If the calculations are turned to manual, the user must turn the calculations back to automatic once he/she is done navigating the workpaper. The options to change these settings in the Excel file are found under Formulas>Calculation Options. If the user is intending to make modeling changes, it is NOT suggested that the user perform this step.
9. Use of the "Ctrl" + "[" shortcut function when navigating in the Excel files is highly encouraged to quickly navigate through the worksheets and Excel files. (See Section 2, Step 3).

For questions on the fully functional model, please contact Reina Gutierrez, Sr. Manager of Cost of Service at reina.gutierrez@txnmenergy.com.

PNM Exhibit RNG – 3

Revenue Requirement Studies, Base Period and Test Period

Is contained in the following 206 pages.

	A	B	C	D
1	**PNM Exhibit RNG-3**			
2	**Lead Sheet Cost of Service**			
3				
4	**Tab - COS BASE ADJ**			
5	**Purpose: Provides the unadjusted books and records of the Company and summarizes adjustments made to the Base Period to develop the Adjusted Base Period.**			
6				
7	-	Unadjusted Base Period (Column F) is based on PNM's Books and Records. See table below for supporting work papers.		
8	-	Columns G through S provide the summary of adjustments made to the Base Period to develop the Adjusted Base Period. See Testimony of PNM Witness Gutierrez for discussion of Base Period Adjustments.		
9	-	Adjusted Base Period (Column T) provides the sum of the unadjusted Base Period and the Base Period adjustments to derive the Adjusted Base Period amounts.		
10				
11	**Tab - COS BASE**			
12	**Purpose**: Provides the allocation of the Adjusted Base Period to PNM Retail and other categories, based on the allocators beginning in Row 741.			
13	-	Adjusted Base Period (Column G) is the Adjusted Base Period values as calculated in COS Base Adj (Column T) explained above.		
14	-	PNM Rate Base Jurisdiction (Column J) reflects the Adjusted Base Period revenue requirement for PNM's proposed Base Rate jurisdictional cost of service, subject to this rate case proceeding. Please refer to the testimony of PNM Witness Gutierrez for further discussion of categories and jurisdictions.		
15				
16	**Tab - COS Test**			
17	**Purpose:** Provides the allocation of the Test Period to PNM Base Rate and other categories, based on the allocators beginning in Row 739.			
18	-	Test Period (Column G) is the proposed Test Period amounts. See table below for supporting work papers for support of amounts included in the Test Period cost of service.		
19	-	Other Manual Adjustments (Column H) provide users an input to propose any adjustments to a cost of service line item. Please refer to PNM Exhibit RNG-2 for further details.		
20	-	Test Period (with Manual Adjustments) (Column I) is the total of the Test Period plus any Manual Adjustments included in Column H. Please note that the as filed Test Period Cost of Service, Column G and Column I will be the same and will only differ if the user adds a manual input in Column H. Column H is only provided as a tool for users to input adjustments if desired in one place.		
21	-	PNM Retail Category (Column J) reflects the Test Period revenue requirement for PNM's Retail category. Please refer to the testimony of PNM Witness Gutierrez for further discussion of categories and jurisdictions.		
22		PNM Grid Mod Category (Column K) reflects the Test Period revenue requirement for PNM's Grid Mod category. Please refer to the testimony of PNM Witness Gutierrez for further discussion of categories jurisdictions.		
23		PNM Base Rate Jurisdiction (Column L) reflects the Test Period revenue requirement for PNM's Retail and Grid Mod cost of service, subject to this rate case proceeding. Please refer to the testimony of PNM Witness Gutierrez for further discussion of categories jurisdictions.		
24				
25	**Tab - Debt-Only Return Adjustment**			
26	**Purpose:** Provides the Base Period and Test Period adjustment to reflect debt-only returns for certain regulatory assets			
27	See row 615 and 613 in COS Base and COS Test.			

	A	B	C	D
1	**PNM Exhibit RNG-3**			
2	**Lead Sheet Cost of Service**			
3				
4	**Tab - COS BASE ADJ**			
28				
29	**Test Change Log**			
30	**Purpose:** Provides a check figure to the filed revenue requirement and allows users to track the impact of any individual changes made throughout the COS Model. See PNM Exhibit RNG-2 for further explanation.			
31				
32	**Tab - A-5 Base and Tab A-5 Test**			
33	Purpose: Rule 530 Schedule A-5 is included in the COS Model. This allows users to change components of the Weighted Average Cost of Capital in the fully functional Model.			
34				
35	**Tab - Table RNG-1**			
36	Purpose: Calculates the proposed rate deficiency, comparing Test Period revenue requirements to existing revenues.			
37				
38				
39	**Reference Table for Cost of Service:**			
40		**Cost of Service Section**		**PNM Exhibit RNG-4 Work Paper or Other Source**
41		Net Plant (Lines 6-81)		WP Plant - Net Plant Work paper
42		Accumulated Deferred Income Taxes (Lines 83-145)		Refer to Direct Testimony of PNM Witness Morris and Rule 530 Schedule H-12
43		Regulatory Assets and Liabilities (Lines 147-191)		WP RA - Reg Asset & Liab Work paper
44		Other Rate Base Items (Lines 193-222)		WP ORB - Other Rate Base Work paper
45		Working Capital (Lines 224 - 247)		WP WC - Working Capital Work paper & Rule 530 Schedule E-1
46		Production Fuel related expenses (Lines 255 - 291)		WP Fuel - Fuel Work paper
47		O&M (Lines 293-442)		WP OM, WP LA and WP SS Work papers
48		Depreciation and Amortization Expense (Lines 444-492)		WP Plant - Net Plant Work paper
49		General Taxes (Lines 494-565)		WP GT - General Taxes Work paper
50		Other Allowable Expenses (Lines 567-604)		WP OA - Other Allowable Exp Work paper
51		Federal Income Tax (Lines 616-668)		Refer to Direct Testimony of PNM Witness Morris and Rule 530 Schedule H-9
52		State Income Tax (Lines 670-696)		Refer to Direct Testimony of PNM Witness Morris and Rule 530 Schedule H-9
53		Revenue Credits (Lines 698-716)		WP Revenue Credits
54		Weighted Cost of Capital (Lines 727-737)		Rule 530 Schedule A-5
55		Key Allocators (Lines 739-818)		WP Allocators & Model Driven Calculations
56				
57	**General Notes**			
58	- Any proposed modeling changes should only be made in this workbook in the Other Manual Adjustments Column. Changes made to any other cell may result in breaking the COS Model and its links.			
59	- Certain information is hard input in this workbook, such as ADIT and Income Taxes. Please refer to the Direct Testimony of PNM witness Morris for an explanation. Cash Working Capital and Fuel is not fully functional within the COS Model.

AL-7	Test Period Transmission Demand Allocators

PNM Exhibit RNG-4 Supporting Revenue Requirements Workpapers

WP Plant-Net Plant Workpaper

Is contained in the following 492 pages.

	A	B	C
1	**PNM Exhibit RNG - 4**		
2	**WP Plant - Lead Sheet**		
3			
4	***Tab Reference***	***Description***	***Purpose***
5	B-3	Rule 530 Schedule B-3	Gross Monthly Plant Balances, by Plant FERC Account and Location
6	C1	Rule 530 Schedule C1	Accumulated Depreciation Reserve, by Plant FERC Account and Location
7	C1a	Detail Support Schedule for Rule 530 C1	Accumulated Reserve Monthly Plant Balances, by Plant FERC Account and Location
8	H-7	Rule 530 Schedule H-7	Depreciation and Amortization Expense
9	WP Plant - 1	Net Plant in Service Monthly Balances, Base, Linkage and Test	Calculates monthly net plant in service balances, by Plant FERC Account and Location
10	WP Plant - 1a	Summary of Net Plant Balances in Cost of Service Format, Base and Test	Summarizes net plant in service balances in cost of service format.
11	WP Plant - 1b	Summary of Depreciation in Cost of Service Format, Base and Test	Summarizes depreciation expense in cost of service format.
12	WP Plant - 1c	Summary of Linkage and Test Period Monthly Depreciation Expense	Provides a summary of Linkage and Test Period Monthly Depreciation Expense by FERC plant Account
13	WP Plant - 2	Gross Plant Activity, Linkage and Test	Provides gross plant activity, by Funding Project, FERC Account, Location, by month
14	WP Plant - 3	Gross Plant Balances, Linkage and Test	Provides gross plant balances, by Funding Project, FERC Account, Location, by month
15	WP Plant - 4	Depreciation Expense, Linkage and Test	Calculates depreciation expense, by Funding Project, FERC Account, Location, by month
16	WP Plant - 5	Establish Accumulated Reserve Balances for Cost of Removal, Retirement, and Abandonment of San Juan Units 2&3	Calculates Beginning Accumulated Reserve Balances for Cost of Removal, Retirement and the Abandonment of San Juan Units 2&3 activity.
17	WP Plant - 6	Accumulated Depreciation Balances, Linkage and Test	Provides accumulated depreciation balances, by Funding Project, FERC Account, Location, by month
18	WP Plant - 7	Depreciation Rates, Existing and Proposed	Provides Base Period existing rates and rates approved in NMPRC Case No. 15-00261-UT final order by FERC Account and Location
19	WP Plant - 8	Gross Corporate Plant Balances and PNM Share Allocation	Calculates PNM share of Corporate Gross Plant and provides Monthly unallocated Corporate Gross Plant Balances by location for Linkage and Test Period
20	WP Plant - 9	Corporate Plant Accumulated Reserve Balances and PNM Allocation	Calculates PNM share of Corporate Plant Accumulated Reserve and provides Monthly unallocated Corporate Plant Accumulated Reserve Balances by location for Linkage and Test Period
21	WP Plant - 10	Gross Corporate Plant Activity, Linkage and Test	Provides Corporate gross plant activity, by Funding Project, FERC Account, Location, by month
22	WP Plant -11	Corporate Gross Plant Balances, Linkage and Test	Provides gross plant balances, by Funding Project, FERC Account, Location, by month for Corporate Plant
23	WP Plant - 12	Corporate Plant Depreciation Expense, Linkage and Test	Calculates Corporate Plant depreciation expense, by Funding Project, FERC Account, Location, by month
24	WP Plant - 13	Establish Accumulated Reserve Balances for Retirements on Corporate Plant	Calculates Beginning Accumulated Reserve Balances for Retirements for Corporate Plant
25	WP Plant -14	Corporate Accumulated Depreciation Balances, Linkage and Test	Provides accumulated depreciation balances, by Funding Project, FERC Account, Location, by month for Corporate Plant
26	WP Plant - 15	Shared Service Depreciation Adjustment	Provides functionalized adjustments to eliminate Corporate depreciation not allocated to PNM and to calculate normalized Base Period corporate depreciation.
27	WP Plant - 15a	Shared Service Depreciation Adjustment	Provides PNM's allocated share of normalized Corporate depreciation by location.

5	
6	**Note 1**: This adjustment reflects the imprudence impairment consistent with the final order in NMPRC Case No. 22-00270-UT. For GAAP accounting purposes, this impairment was recorded to FERC Account 116 "Other Electric Plant Adjustments"; however for regulatory purposes, this adjustment is reclassified into FERC Account 101, to properly remove the amounts from rate base.
7	**Note 2:** The Palo Verde Asset Retirement Costs, recorded in plant in service, are not included in rate base, as final decommissioning of PV are ultimately funded to an external trust, and recovery of decommissioning expense from PNM Retail customers are based on those funding amounts. This treatment is consistent with prior rate cases.
8	**Note 3**: Adjustment reflects reclassification of capital assets at the end of the Base Period associated with Palo Verde Leased Capacity. Leased Capacity assets approved to be recovered as through regulatory assets have been reclassified to the Regulatory Asset Workpapers. This adjustment is consistent with the treatment in the Final Order of NMPRC Case No. 22-00270-UT.
9	**Note 4:** Reflects capital investment on Shared Services that are allocated to subsidiaries other than PNM. See WP Plant - 8, columns T, U and V for Base Period allocation to PNM. The allocation of Shared Services is based on the 13-month average at the end of the Test Period. For the Test Period, the 13-month average was calculated on a total company basis prior to the allocation of assets to PNM. Please refer to WP Plant - 8, columns BD, BE and BF for Test Period allocation to PNM.
10	**Note 5**: FERC accounts 365 (Overhead Conductors and Devices), 366 (Underground Conduit) and 367 (Underground Conductors and Devices) are allocated between Primary and Secondary System Distribution based on conductor footage study. See WP Plant -1 for allocation percentages. Also see the Direct Testimony of PNM witness Gray for further discussion on the conductor footage study. This note relates to information grouped within the outline function and is not visible on the printed schedule.
11	**Note 6**: Information in Column B "Location Number" is utilized to identify the applicable depreciation rates.
12	**General Notes**:
13	Please see the Direct Testimonies of PNM Witnesses Gray, Flores-Olivas, Sanchez, Phelps, and Gutierrez for discussion of adjustments/changes to the Base Period, Test Period.
14	Please see WP Plant - 1a for variance between adjusted Base Period and Test Period balances.
15	The electronic version of this worksheet uses the Microsoft excel outline function. This function groups the elements of cost, and or columns for print formatting purposes.

7	
8	**Note 1**: FERC accounts 365 (Overhead Conductors and Devices), 366 (Underground Conduit) and 367 (Underground Conductors and Devices) are allocated between Primary and Secondary System Distribution based on conductor footage study. See WP Plant -1 for allocation percentages. Also see the Direct Testimony of PNM Witness Gray for further discussion on the conductor footage study. This note relates to information grouped within the outline function and is not visible on the printed schedule.
9	**Note 2**: Information in Column B "Location Number" is utilized to identify the applicable depreciation rates.
10	
11	**General Notes:**
12	The electronic version of this worksheet uses the Microsoft excel outline function. This function groups the elements of cost, and or columns for print formatting purposes.

	A
1	**Public Service Company of New Mexico**
2	**Schedule C-1 a (Notes)**
3	**Accumulated Provision for Depreciation and Amortization by Functional Classification**
4	Link to WP Plant Lead Sheet
5	
6	**Note 1**: This adjustment reflects the imprudence impairment consistent with the final order in NMPRC Case No. 22-00270-UT. For GAAP accounting purposes, this impairment was recorded to FERC Account 116 "Other Electric Plant Adjustments"; however for regulatory purposes, this adjustment is reclassified into FERC Account 101, to properly remove the amounts from rate base.
7	**Note 2:** The Palo Verde Asset Retirement Costs, recorded in plant in service, are not included in rate base, as final decommissioning of PV are ultimately funded to an external trust, and recovery of decommissioning expense from PNM Retail customers are based on those funding amounts. This treatment is consistent with prior rate cases.
8	**Note 3**: Adjustment reflects reclassification of capital assets at the end of the Base Period associated with Palo Verde Leased Capacity. Leased Capacity assets approved to be recovered as through regulatory assets have been reclassified to the Regulatory Asset Workpapers. Assets associated with the sale of certain assets to SRP are removed to account for this sale transactions. This adjustment is consistent with the treatment in the Final Order of NMPRC Case No. 22-00270-UT.
9	**Note 4:** Reflects capital investment on Shared Services that are allocated to subsidiaries other than PNM. See WP Plant - 8, columns T, U and V for Base Period allocation to PNM. The allocation of Shared Services is based on the 13-month average at the end of the Test Period. For the Test Period, the 13-month average was calculated on a total company basis prior to the allocation of assets to PNM. Please refer to WP Plant - 8, columns BA, BB and BC for Test Period allocation to PNM.
10	**Note 5**: FERC accounts 365 (Overhead Conductors and Devices), 366 (Underground Conduit) and 367 (Underground Conductors and Devices) are allocated between Primary and Secondary System Distribution based on conductor footage study. See WP Plant -1 for allocation percentages. Also see the Direct Testimony of PNM Witness Gray for further discussion on the conductor footage study. This note relates to information grouped within the outline function and is not visible on the printed schedule.
11	**Note 6**: Information in Column B "Location Number" is utilized to identify the applicable depreciation rates.
12	**General Notes**:
13	Please see the Direct Testimonies of PNM Witnesses Gray, Flores-Olivas, Sanchez, Phelps, and Gutierrez for discussion of adjustments/changes to the Base Period, Test Period.
14	Please see WP Plant - 1a for variance between adjusted Base Period and Test Period balances.
15	The electronic version of this worksheet uses the Microsoft excel outline function. This function groups the elements of cost, and or columns for print formatting purposes.

5	
6	**Note 1**: This adjustment reflects the imprudence impairment consistent with the final order in NMPRC Case No. 22-00270-UT. For GAAP accounting purposes, this impairment was recorded to FERC Account 116 "Other Electric Plant Adjustments"; however for regulatory purposes, this adjustment is reclassified into FERC Account 101, to properly remove the amounts from rate base.
7	**Note 2:** The Palo Verde Asset Retirement Costs, recorded in plant in service, are not included in rate base, as final decommissioning of PV are ultimately funded to an external trust, and recovery of decommissioning expense from PNM Retail customers are based on those funding amounts. This treatment is consistent with prior rate cases.
8	**Note 3**: Adjustment reflects reclassification of capital assets at the end of the Base Period associated with Palo Verde Leased Capacity. Leased Capacity assets approved to be recovered as through regulatory assets have been reclassified to the Regulatory Asset Workpapers. Assets associated with the sale of certain assets to SRP are removed to account for this sale transactions. This adjustment is consistent with the treatment in the Final Order of NMPRC Case No. 22-00270-UT.
9	**Note 4:** PNM Annualized base period depreciation expense by multiplying the June 2026 gross plant balance by the applicable annual depreciation rate that was approved in Case No. 22-00270-UT. The calculation takes base period ending balance and allocates Depreciation rate to determine the total of annualized depreciation. The total will then subtract the expense amount, and will calculate an adjustment (if necessary).
10	**Note 5**: Reflects capital investment on Shared Services that are allocated to subsidiaries other than PNM. See WP Plant - 8, columns T, U and V for Base Period allocation to PNM. The allocation of Shared Services is based on the 13-month average at the end of the Test Period. For the Test Period, the 13-month average was calculated on a total company basis prior to the allocation of assets to PNM. Please refer to WP Plant - 8, columns BD, BE and BF for Test Period allocation to PNM.
11	**Note 6**: FERC accounts 365 (Overhead Conductors and Devices), 366 (Underground Conduit) and 367 (Underground Conductors and Devices) are allocated between Primary and Secondary System Distribution based on conductor footage study. See WP Plant -1 for allocation percentages. Also see the Direct Testimony of PNM witness Gray for further discussion on the conductor footage study. This note relates to information grouped within the outline function and is not visible on the printed schedule.
12	**Note 7**: Information in Column B "Location Number" is utilized to identify the applicable depreciation rates.
13	**General Notes**:
14	Please see WP Plant - 1b for variance between Adjusted Base Period and Test Period and the depreciation change attributable to the change in depreciation rates.
15	The electronic version of this worksheet uses the Microsoft excel outline function. This function groups the elements of cost, and or columns for print formatting purposes.

4			
5	**Note 1**: This adjustment reflects the imprudence impairment consistent with the final order in NMPRC Case No. 22-00270-UT. For GAAP accounting purposes, this impairment was recorded to FERC Account 116 "Other Electric Plant Adjustments"; however for regulatory purposes, this adjustment is reclassified into FERC Account 101, to properly remove the amounts from rate base.		
6	**Note 2:** The Palo Verde Asset Retirement Costs, recorded in plant in service, are not included in rate base, as final decommissioning of PV are ultimately funded to an external trust, and recovery of decommissioning expense from PNM Retail customers are based on those funding amounts. This treatment is consistent with prior rate cases.		
7	**Note 3**: Adjustment reflects reclassification of capital assets at the end of the Base Period associated with Palo Verde Leased Capacity. Leased Capacity assets approved to be recovered as through regulatory assets have been reclassified to the Regulatory Asset Workpapers. Assets associated with the sale of certain assets to SRP are removed to account for this sale transactions. This adjustment is consistent with the treatment in the Final Order of NMPRC Case No. 22-00270-UT.		
8	**Note 4:** Reflects capital investment on Shared Services that are allocated to subsidiaries other than PNM. See WP Plant - 8, columns T, U and V for Base Period allocation to PNM. The allocation of Shared Services is based on the 13-month average at the end of the Test Period. For the Test Period, the 13-month average was calculated on a total company basis prior to the allocation of assets to PNM. Please refer to WP Plant - 8, columns BA, BB and BC for Test Period allocation to PNM.		
9	**Note 5**: FERC accounts 365 (Overhead Conductors and Devices), 366 (Underground Conduit) and 367 (Underground Conductors and Devices) are allocated between Primary and Secondary System Distribution based on conductor footage study. See WP Plant -1 for allocation percentages. Also see the Direct Testimony of PNM witness Gray for further discussion on the conductor footage study. This note relates to information grouped within the outline function and is not visible on the printed schedule.		
10	**Note 6**: Information in Column B "Location Number" is utilized to identify the applicable depreciation rates.		
11			
12	**General notes**:		
13	Net Plant balances on this workpaper are derived by subtracting the Accumulated Reserve Balances on Rule 530 Schedule C-1a from Gross Plant Balances on Rule 530 Schedule B-3.		
14	The electronic version of this worksheet uses the Microsoft excel outline function. This function groups the elements of cost, and or columns for print formatting purposes.		
15			
16		Footage	Percentage
17	Primary Conductors	134,436,040	66%
18	Secondary Conductors	69,558,301	34%
19	Total	203,994,341	100%

2	**WP Plant - 1a: Notes**
3	Link to WP Plant Lead Sheet
4	
5	
6	**Note 1**: Changes in balances are a result of projected capital additions and changes to accumulated depreciation. See additional WP Plant workpapers for detailed calculations and projections.
7	Note 2: Please refer to PNM Exhibit RNG-4 WP Plant - 8 and WP Plant -9, Column T, U & V for calculations supporting Shared Services Base Period adjustment. The Base Period adjustment for Shared Services reflects PNM's allocated share of Net Plant from Shared Services.
8	**Note 3:** The reduction in acquisition adjustments reflects on-going amortization through Linkage Period and Test Period.
9	**Note 4**: This acquisition adjustment will be fully amortized before the end of the Test Period.
10	**Note 5**: Four Corners imprudence impairment adjustment is reflected in the Base Period. Additionally, PNM's proposed changes to Four Corners Depreciation rate reduces the Net Plant balances for Steam Generation
11	**Note 6**: These assets will be fully depreciated before the end of the Test Period.
12	**Note 7:** Reflects costs associated with Rate Class 6, please refer to the testimony of PNM Witness Pitts for further discussion.
13	**Note 8:** Reflects increase in Renewable G & I activity due to Battery Storage projects in Linkage Period and Test Period

4	
5	
6	**Note 1**: Changes to depreciation expense are a result of gross plant additions and the change in depreciation rates at Four Corners Power Plant. See additional supporting WP Plant workpapers for detailed calculations and projections.
7	**Note 2**: PNM calculated the test period depreciation expense using the existing rates to provide the impact to the test period as the result of the proposed new depreciation rates. These amounts are not functional as it is not feasible to make this calculation fully functional due to the size and complexity of the calculation.
8	**Note 3**: This acquisition adjustment will be fully amortized before the end of the Test Period.

1	**PNM Exhibit RNG-4**
2	**WP Plant 1c: Linkage and Test Monthly Depreciation Expense (Notes)**
3	Link to WP Plant Lead Sheet
4	
5	
6	**Note 1**: Information in Column B "Location Number" is utilized to identify the applicable depreciation rates.
7	**Note 2**: FERC accounts 365 (Overhead Conductors and Devices), 366 (Underground Conduit) and 367 (Underground Conductors and Devices) are allocated between Primary and Secondary System Distribution based on conductor footage study. See WP Plant -1 for allocation percentages. Also see the Direct Testimony of PNM Witness Gray for further discussion on the conductor footage study. This note relates to information grouped within the outline function and is not visible on the printed schedule.
8	**General Notes**:
9	Corporate Unallocated monthly depreciation utilizes complex "array" formulas, to perform a SUMIF function across two linked Excel Workbooks. Clicking into these (including the "F2" function) will break the array formula and return a zero value. Do not attempt to manipulate these formulas.
10	The electronic version of this worksheet uses the Microsoft excel outline function. This function groups the elements of cost, and or columns for print formatting purposes.

	A
1	**PNM Exhibit RNG - 4**
2	**WP Plant - 6: Accumulated Depreciation Plant Balances, Linkage and Test (Notes)**
3	Link to WP Plant Lead Sheet
4	
5	
6	**Note 1**: Certain June 30, 2026 book balance amounts are fully depreciated. PNM identified these amounts separately to ensure depreciation expense is properly estimated in the Linkage and Test Period.
7	**Note 2**: Retirements of legacy meters as they are replaced by AMI meters is modeled to remove the assets from rate base when they are no longer used and useful. Refer to OA-3 for detail of the calculation.
8	**General Notes:**
9	The electronic version of this worksheet uses the Microsoft Excel outline function. This function groups the elements of cost, and or columns for print formatting purposes.

PNM Exhibit RNG-4 Supporting Revenue Requirements Workpapers

WP RA- Reg Asset and Liab Workpaper

Is contained in the following 65 pages.

	A	B	C	D	E
1	**PNM Exhibit RNG-4**				
2	**WP RA-Lead**				
3				***Provides Information To***	***Requires Information From***
4	***Tab Reference***	***Description***	***Purpose***	***Tab name***	***Tab name***
5	WP RA-1	Regulatory Assets and Liabilities Base Period, Linkage Data and Test Period	Summary of Regulatory Asset and Liability amortization and balances for Base Period, Test Period and Linkage Data	PNM Exhibit RNG-3 WP COS.xlsx; PNM Exhibit RNG-3 COS Test, WP-RA-3 Loss of Reacq pg. 1, WP OA-Other Allowable Exp Workpaper.xlsx; WP OA-1	WP RA-3, WP RA-4, WP RA-5, WP RA-6, WP RA-7, WP RA-8, WP RA-9, WP RA-10, WP RA-11, WP RA-12, WP RA-13, WP RA-14, WP RA-15, WP RA-16, WP RA-17, WP RA-18, WP RA-19, WP-ORB-Other Rate Base Workpaper.xlsx; WP ORB-11, Manual inputs
6	WP RA-2 Pg 1	Loss on Reacquired Debt Cost Benefit Analysis	Calculates Loss on Reacquired Debt Cost/Benefit Analysis	None	WP-RA-2 pg 2, PNM Exhibit RNG-3-WP COS.xlsx; PNM Exhibit RNG-3 COS Test, A5-Test, WP ORB-Other Rate Base Workpaper.xlsx; WP ORB-11
7	WP RA-2 Pg 2	Loss on Reacquired Debt Cost Benefit Analysis	Provides theoretical test period WACC utilized for cost/benefit analysis	WP RA-2 Loss of Reacq pg1	PNM Exhibit-RNG-3-WP COS.xlsx; A5-Test, WP RA-2 pg3
8	WP RA-2 Pg 3	Loss on Reacquired Debt Cost Benefit Analysis	Calculates effective cost of debt assuming no debt refinancing	WP RA-2 Loss of Reacq pg2	Manual inputs, WP-RA-2 pg 2
9	WP RA-3	Renewables Federal Grant Amortization calculation	Calculates Renewables Federal Grant Regulatory Liability amortizations and balances for Linkage Data and Test Period	WP RA-1	WP RA-1
10	WP RA-4	Renewables State Grant Amortization Calculation	Calculates Renewables State Grant Regulatory Liability amortizations and balances for Linkage Data and Test Period	WP RA-1	WP RA-1
11	WP RA-5	50% SJGS Unit 2&3 Undepreciated Investment	Calculates 50% SJGS Unit 2&3 Undepreciated Investment amortizations and balances for Linkage data and Test Period	WP RA 1	WP RA-1
12	WP RA-6	Energy Imbalance Market (EIM) One Time Implementation Costs	Calculates Energy Imbalance Market (EIM) One Time Implementation Costs amortizations and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
13	WP RA-7	SJGS Replacement Resources	Calculates SJGS Replacement Resources carrying charges, amortizations and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
14	WP RA-8	SJGS External Legal Expenses	Calculates SJGS External Legal Expenses carrying charges, amortizations and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
15	WP RA-9	SJGS Obsolete Inventory	Calculates SJGS Obsolete Inventory carrying charges, amortizations and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
16	WP RA-10	COVID-19 Reg Asset & Liab	Calculates COVID-19 Regulatory Asset and Liability activity, amortizations and balances for Linkage data and Test Period. Also includes the new proposed COVID Layer.	WP RA-1	WP RA-1, Manual inputs
17	WP RA-11	Amortization of PVNGS Unit 1 - 104.2MW Undepreciated Investment Pre Lease renewal	Calculates the pre lease continuance amortization and balances for PVNGS Unit 1 Undepreciated Investment	WP RA-1	WP RA-1, Manual inputs
18	WP RA-12	Amortization of PVNGS Unit 2 - 10MW Undepreciated Investment Pre Lease Renewal	Calculates the pre lease continuance amortization and balances for PVNGS Unit 2 Undepreciated Investment	WP RA-1	WP RA-1, Manual inputs

	A	B	C	D	E
1	**PNM Exhibit RNG-4**				
2	**WP RA-Lead**				
3				***Provides Information To***	***Requires Information From***
4	***Tab Reference***	***Description***	***Purpose***	***Tab name***	***Tab name***
19	WP RA-13	PVNGS Costs to Obtain Replacement Resources	Calculates estimated Costs to Obtain an Abandonment Order for PVNGS for the Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
20	WP RA-14	PVNGS True-up for SRP Transaction Proceeds	PVNGS True-up for SRP Transaction Proceeds for the Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
21	WP RA-15	Amortization of 2024 Rate Case Expenses	Calculates 2024 Rate Case Expenses amortization and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
22	WP RA-16	Energy Transition Cost True-up	Calculates Energy Transition Cost True-up amortization and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
23	WP RA-17	SJGS Final ETA	Calculates SJGS Final ETA Mine Reclamation amortization and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
24	WP RA-18	Time of Day Program	Calculates Time of Day amortization and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
25	WP RA-19	Community Solar	Calculates Community Solar amortization and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
26	WP RA-20	Amortization of 2025 Rate Case Expenses	Calculates 2025 Rate Case Expenses amortization and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
27	WP RA-21	ESA Deferral	Calculates ESA Deferral amortization and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
28	WP RA-22	2026 IRP Costs	Calculates 2026 IRP Cost amortization and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
29	WP RA-23	EDAM Integration	Calculates EDAM Integration amortization and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
30	WP RA-24	Energy Efficiency M&V Cost	Calculates Energy Efficiency M&V Cost amortization and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
31	WP RA-25	PVNGS Lease Cost	Calculates PVNGS Lease Cost amortization and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
32	WP RA-26	SJGS Retirement Rate Credits	Calculates SJGS Retirement Rate Credits amortization and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
33	WP RA-27	ITC Sandia & ITC Sunbelt	Calculates ITC Sandia & ITC Sunbelt amortization and balances for Linkage data and Test Period	WP RA-1	WP RA-1, Manual inputs
34	WP RA-28	SJGS Decommissioning Ordinance Costs	Calculates month to month accretion expense and amortization of the SJGS Decommissioning Ordinance Costs during Linkage and Test Periods	WP RA-1	WP RA-1, Manual inputs
35
